01 WHAT IS IN THIS FILE

Concept Animation Storyboard	DRAWING
Fig10 masterplan	PLAN

02 THE SCALE OF THE ANALYSIS BEHIND IT

39 years
of climate normals (NCM, 1977–2015) rebuilt into an 8,760-hour modelled year

8,760 hours
of sun position ray-traced against 131 trees for every hour of the year

15,000
one-metre ground cells modelled for shade and comfort, site-wide

4 models
trained and tested for leakage — two of them decide what this document reports

41 checks
run on every rebuild, so a wrong number fails loudly instead of shipping quietly

VERIFY THIS DOCUMENT

Every quantity in this file is regenerated from data by code. Nothing is typed by hand.

Repository	github.com/wasim437/AI_SAFA
Live portal	wasim437.github.io/AI_SAFA/
Produced by	tools/sync_film.py · tests/test_film.js
Reproduce	`python run_analysis.py` · `python -m tests.test_pipeline`

Generated 2026-08-03 · reproducible with python tools/build_submission_pdfs.py

A ten-phase process, checked at every step

Nothing downstream is hand-drawn or hand-typed — change an input and every figure moves with it, or a test fails loudly.

01 THE TEN PHASES

P1 Site & Context Analysis
39 years of NCM normals rebuilt into an 8,760-hour year, verified back to within 0.39 °C; sun position for every hour via NREL/pvlib; shadow geometry; 7,640 residents inside a ten-minute walk

P2 Problem Definition
Phase 1 findings turned into problems and scored by severity rather than listed flat — thermal discomfort dominates everything else

P3 Opportunity & Objectives
The ranked problems converted into measurable targets, including the comfort-hours target the finished design is scored against

P4 Concept Development
Multiple plan forms generated and swept against the solar model; the crescent selected on hours-with-no-shade, not on mean coverage

P5 Masterplan Development
Every room struck off the crescent's centre; areas taken as the shoelace area of the drawn polygon, so the schedule closes on 15,000 m²

P6 Detailed Design
The canopy section solved against shadow geometry — 7 m walk, 18 m gridshell at 4.5 m, 3 m southern louvre; 131 trees at mature canopy

P7 Performance & Sustainability
Water balance, carbon, the canopy PV deficit, and ray-traced shade performance by zone

P8 User Experience & Activation
K-Means microclimate regimes and the hour-by-month comfort surface; programming targeted at late afternoon, spring and autumn

P9 **AI Workflow & Visualisation** ★ THIS DOCUMENT
The four models and the anti-leakage discipline; drawings, boards, the analytics portal and the sixty-second film

P10 Submission Assembly
Every report and visual mapped onto the twelve upload slots, each with a manifest naming what produced it

03 REPRODUCE IT END TO END

```
pip install -r requirements.txt
python run_analysis.py           # data, models, figures
python -m src.drawings           # section, elevation, planting
python -m src.boards             # the presentation boards
python tools/build_submission_pdfs.py
python -m tests.test_pipeline    # 41 checks
```

Concept Animation — Storyboard

Sixty seconds, drawn from the project's own analysis

The film is not an illustration of the design; it is rendered from the design. Its geometry comes from the same arc definition as the masterplan and its sun from the same 8,760-hour solar model, so it cannot drift away from the drawings the way an animation produced separately would.

Upload slot 12 — One-minute Concept Animation — Storyboard
Al Safa 2 Park · **Falaj Al Safa** · 15,000 m² · Al Safa 2, Dubai
Mohamed Wasim · Individual Applicant
Issued 03 August 2026

Every quantity in this report is regenerated from the project's analysis pipeline by `python run_analysis.py`. No figure quoted here is typed in by hand.

1. Structure — five scenes, sixty seconds

Time	Scene	What it shows
0–7 s	**The site**	Al Safa 2 as it is today: flat, exposed, and empty at midday
7–18 s	**The heat**	The reason it is empty — the modelled heat index across a summer day, and the hours that are lost to it
18–38 s	**The crescent**	The arc builds and plants itself while a full computed day passes over it. 131 trees, the falaj, the radial alleys and the rooms appear in the order they are reached
38–48 s	**Beneath it**	Eye level on the walk: the dappled soffit, the louvre cutting the low sun, the channel at the edge
48–60 s	**The proof**	The measured result — comfortable hours rising from 44.5% to 64.6% — as the park fills at dusk

Scene boundaries are asserted by tests/test_film.js, which renders every frame and fails on any gap, overlap or invalid value.

2. Why it can be trusted against the drawings

- The arc is the same 141 m radius as the masterplan, regenerated by tools/sync_film.py from src/plan.py.
- The sun positions are the same NREL-computed values used by the shade model — the shadows move correctly for the site's latitude and the time of year being shown.
- The tree count, the 0.9 m channel and the room layout are read from the same geometry as every drawing in this submission.
- Every frame is rendered by an automated test that fails on any NaN or undefined value, so a geometry change cannot break the film quietly.

3. How to produce the video file

- Open `concept_film.html` full-screen in a browser.
- Start a screen recording (Win + Alt + R on Windows, Shift + Cmd + 5 on macOS).
- Press Restart and let all sixty seconds run.
- Stop, trim the ends, and add a voiceover if wanted.

The film shows the **analysed** scheme exactly: the same arc, the same trees, the same solar model. It is therefore consistent with every number quoted elsewhere in this submission.

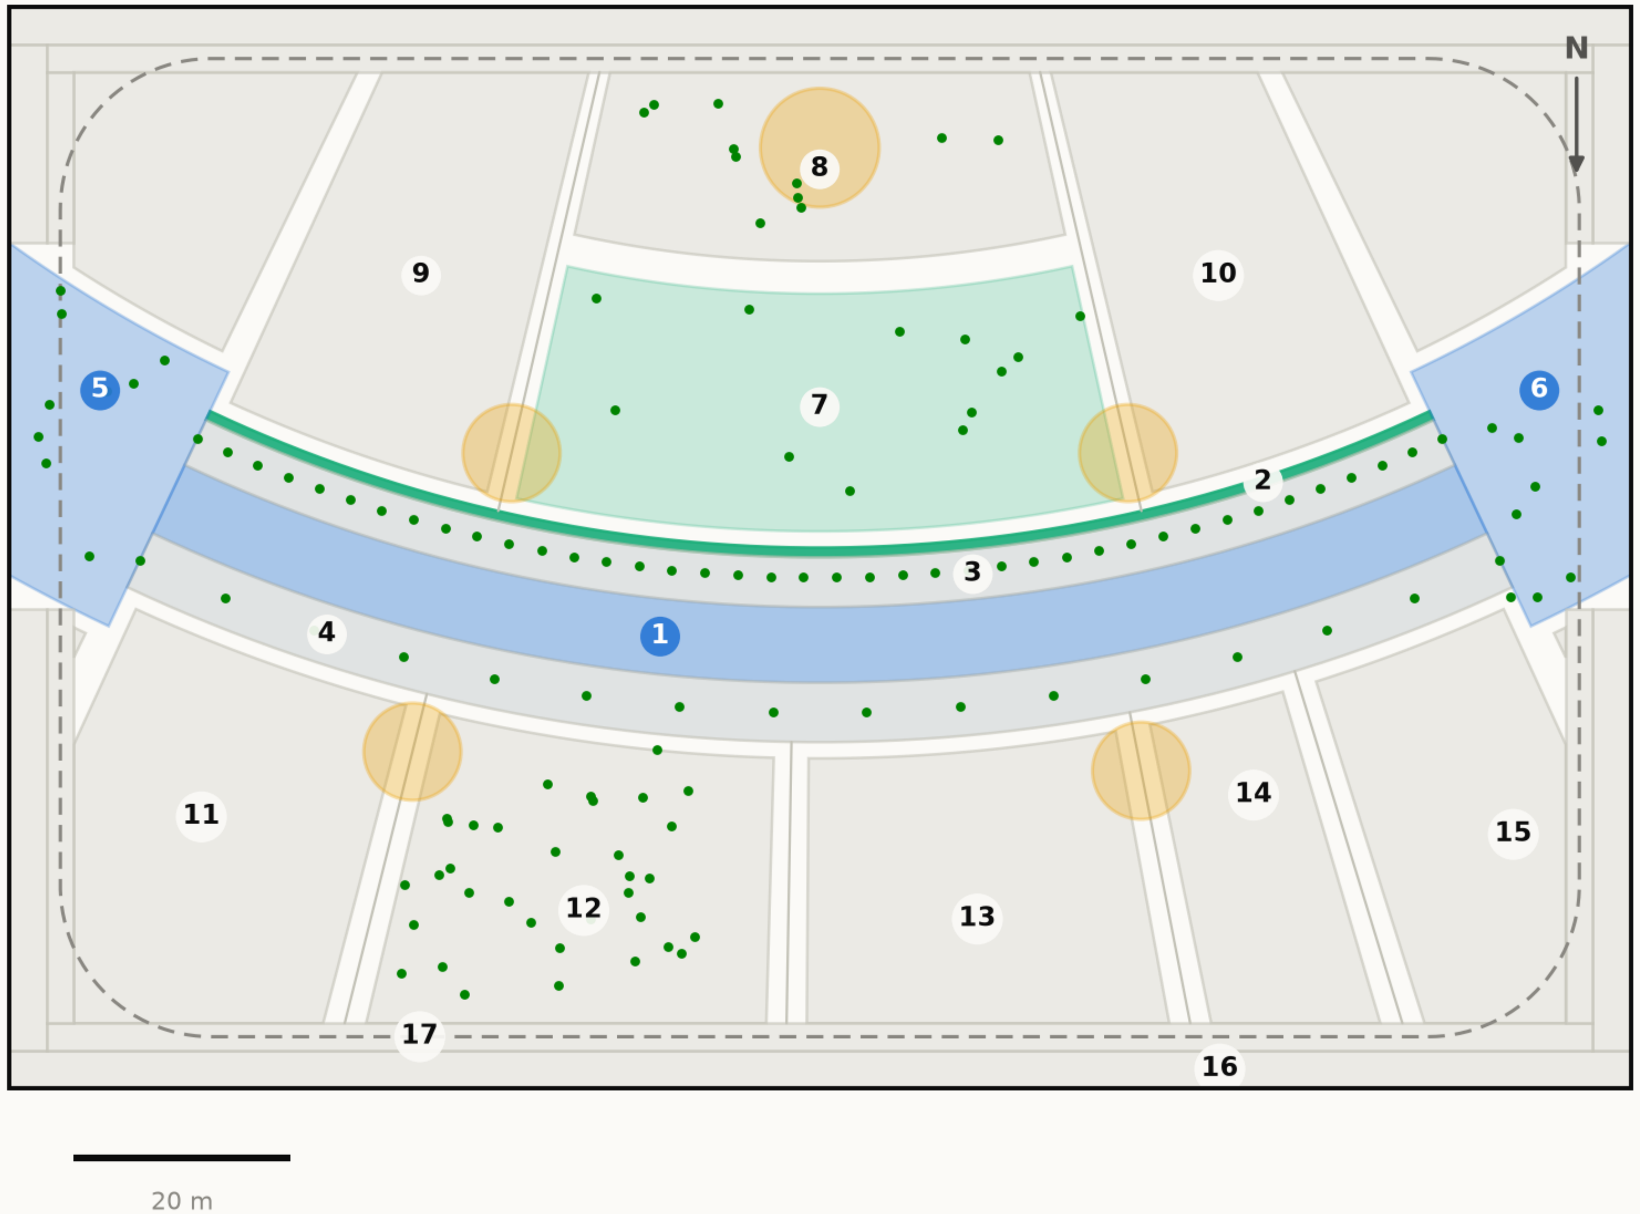
Every quantity above is regenerated by `python run_analysis.py` and asserted by `python -m tests.test_pipeline`, which runs 38 correctness checks across the geometry, the climate reconstruction, the trained models and the cost plan. Nothing in this report is typed in by hand.

Fig10 masterplan

Technical drawing — to scale. Geometry generated by src/plan.py; every area is the measured area of the drawn polygon.

Masterplan — Falaj Al Safa

One arc, and every room struck off its centre. Drawn from src/plan.py, the same geometry the models use



ROOM SCHEDULE

1	Al Mamsha — the Crescent Walk	871 m²
2	Al Falaj — the water channel	105 m²
3	Crescent Shade Margin (N)	549 m²
4	Crescent Shade Margin (S)	715 m²
5	West Gate Majlis	439 m²
6	East Gate Majlis	439 m²
7	Al Nakhil — the Oasis Basin	1,140 m²
8	Quiet Contemplation Garden	707 m²
9	Children's Dune Play	1,267 m²
10	Family Picnic Grove	1,267 m²
11	Outdoor Fitness Terrace	908 m²
12	Native Planting / Biodiversity Wadi	894 m²
13	Community Plaza & Event Lawn	787 m²
14	Souk Kiosks & Services	417 m²
15	Multipurpose Sports Lawn	630 m²
16	Al Kathib — the dune berm	1,464 m²
17	Al Madar — the perimeter loop	986 m²
	Al Sikkak — shaded alleys & setbacks	1,414 m²
	Total	**15,000 m²**

Crescent radius 141 m, sagitta 18 m. Green dots are the 131 trees; circles are the majlis pavilions; the dashed line is Al Madar, the running loop. Site boundary is an ASSUMED 150×100 m rectangle pending DWG confirmation.

Proof the analysis runs, and what it reports

These are the values the pipeline wrote on its last run, read straight out of the files it produced. The commands below regenerate every one of them from the published repository.

MEASURED RESULT	models/headline_metrics.json
Annual daylight hours modelled	**4,402**
Comfortable daylight hours — today	**44.5%**
Comfortable daylight hours — as designed	**64.6%**
Mean heat-index reduction under canopy	**7.13 °C**
Peak heat index, exposed	**56.8 °C**
Peak heat index, shaded	**48.7 °C**
Crescent Walk shaded, canopy and louvre	**87.3%**
Site-wide mean shade	**34.1%**
Trees planted	**131**

TRAINED MODELS, ON HELD-OUT TEST SETS	models/model_metrics.json
M1a Random Forest — shade surrogate, test R^2	**0.9982**
M1b Neural network — deployed surrogate, test R^2	**0.9944**
M2 Gradient Boosting — comfort band, test accuracy	**97.5%**
M3 K-Means — regimes selected by silhouette	**k = 2**
Training / validation / test split	**10,500 / 2,250 / 2,250**
Random seed, fixed for reproducibility	**42**

RUN IT YOURSELF

```
git clone https://github.com/wasim437/Al_SAFA.git
pip install -r requirements.txt
python run_analysis.py           # data, models, figures
python -m tests.test_pipeline    # 41 correctness checks
node docs/_PORTAL/selftest.js    # 64 portal checks
node tests/test_film.js          # every frame of the film
```

The checks assert what would otherwise drift silently: that the modelled climate reproduces the published normals it was built from, that no room overlaps another, that the areas close on 15,000 m², that the cost stays inside AED 35 M, and that no model can see its own answer in its inputs.

The complete project, and where to check it

Every one of the 120 links below is live. The repository holds the data as issued and as processed, the code, the trained models, the drawings and the tests, and it runs end to end with one command. A juror who wants to know where a number came from can be given a file path rather than an opinion.

Repository	**github.com/wasim437/Al_SAFA**
