01 WHAT IS IN THIS FILE

Phase8 User Experience and Activation Report	DRAWING
Circulation	DRAWING
Fig08 microclimate regimes	FIGURE
Fig09 diurnal comfort	FIGURE

02 THE SCALE OF THE ANALYSIS BEHIND IT

39 years
of climate normals (NCM, 1977–2015) rebuilt into an 8,760-hour modelled year

8,760 hours
of sun position ray-traced against 131 trees for every hour of the year

15,000
one-metre ground cells modelled for shade and comfort, site-wide

4 models
trained and tested for leakage — two of them decide what this document reports

41 checks
run on every rebuild, so a wrong number fails loudly instead of shipping quietly

03 THE PHASES BEHIND THIS FILE

P8 User Experience & Activation

VERIFY THIS DOCUMENT

Every quantity in this file is regenerated from data by code. Nothing is typed by hand.

Repository	github.com/wasim437/AI_SAFA
Live portal	wasim437.github.io/AI_SAFA/
Produced by	CODE src/models.py src/climate.py DATA data/processed/hourly_climate_comfort_8760.csv
Reproduce	`python run_analysis.py` · `python -m tests.test_pipeline`

Generated 2026-08-03 · reproducible with python tools/build_submission_pdfs.py

A ten-phase process, checked at every step

Nothing downstream is hand-drawn or hand-typed — change an input and every figure moves with it, or a test fails loudly.

01 THE TEN PHASES

P1 Site & Context Analysis
39 years of NCM normals rebuilt into an 8,760-hour year, verified back to within 0.39 °C; sun position for every hour via NREL/pvlib; shadow geometry; 7,640 residents inside a ten-minute walk

P2 Problem Definition
Phase 1 findings turned into problems and scored by severity rather than listed flat — thermal discomfort dominates everything else

P3 Opportunity & Objectives
The ranked problems converted into measurable targets, including the comfort-hours target the finished design is scored against

P4 Concept Development
Multiple plan forms generated and swept against the solar model; the crescent selected on hours-with-no-shade, not on mean coverage

P5 Masterplan Development
Every room struck off the crescent's centre; areas taken as the shoelace area of the drawn polygon, so the schedule closes on 15,000 m²

P6 Detailed Design
The canopy section solved against shadow geometry — 7 m walk, 18 m gridshell at 4.5 m, 3 m southern louvre; 131 trees at mature canopy

P7 Performance & Sustainability
Water balance, carbon, the canopy PV deficit, and ray-traced shade performance by zone

P8 **User Experience & Activation** THIS DOCUMENT
K-Means microclimate regimes and the hour-by-month comfort surface; programming targeted at late afternoon, spring and autumn

P9 AI Workflow & Visualisation
The four models and the anti-leakage discipline; drawings, boards, the analytics portal and the sixty-second film

P10 Submission Assembly
Every report and visual mapped onto the twelve upload slots, each with a manifest naming what produced it

```

UPLOAD SLOT 07 OF 12 · USER EXPERIENCE & ACTIVATION STRATEGY

User Experience & Activation Strategy

Who uses this park, when, and what the climate permits

Activation strategies usually assert a programme. This one derives it. The comfort model says exactly when the park is pleasant, and the programme is built to match those windows rather than to fill a calendar — which means committing, in writing, to not programming summer midday outdoors.

Al Safa 2 Park · **Falaj Al Safa** · 15,000 m² · Al Safa 2, Dubai · Mohamed Wasim, Individual Applicant · Issued 03 August 2026 · every quantity regenerated by `python run_analysis.py`

1. The catchment

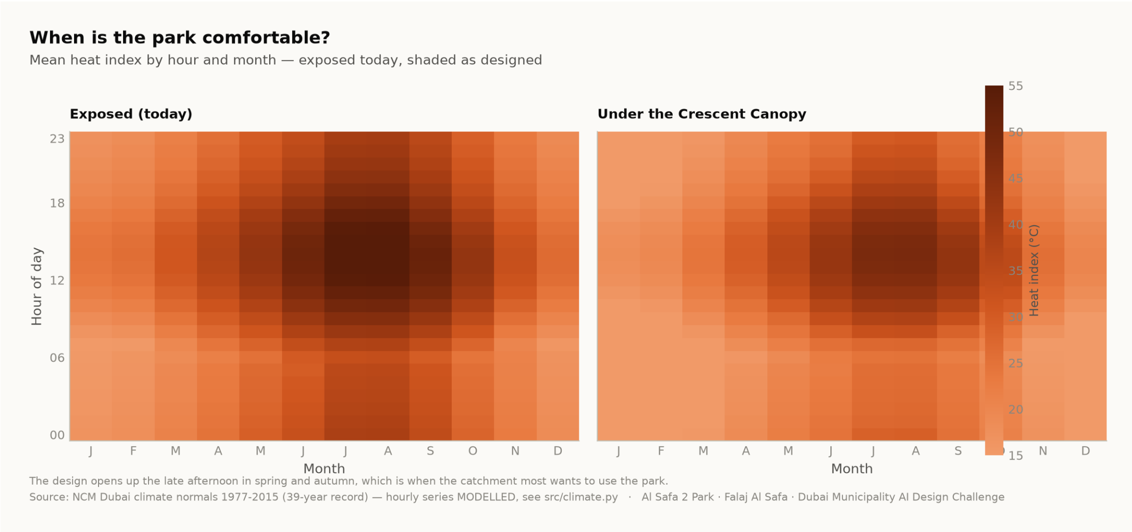
Approximately **7,640 residents** live within a ten-minute walk of the site (Dubai Statistics Center, 2023). Al Safa 2 is an established low-rise residential neighbourhood with a mixed demographic — families with young children, working adults, domestic staff, and a significant population of older residents.

2. Five user groups, and what each one needs

User group	When they come	What the design owes them
Families with young children	Late afternoon, weekends	Play in shade, seating with sightlines to it, a drinking fountain and a restroom within sight of the play area
Older residents	Early morning, evening	Step-free routes, shaded rest never far from the walk, seating at close intervals, no level change without a ramp
Runners and walkers	Dawn and after dark	A continuous loop with a known distance, lit at ankle height, separated from play and picnic
Workers on a break	Midday, year round	The one part of the site that is genuinely cool at noon — the crescent walk and the basin
Community and events	Evenings, cooler months	A flexible plaza and event lawn on the convex face, with the souk adjacent so trade and programme reinforce each other

3. When the park is actually comfortable

The comfort model resolves every hour of the year. Today 44.5% of daylight hours are comfortable; as designed, 64.6% are. The gain is not spread evenly, and that is the useful part: it concentrates in **late afternoon, in spring and autumn**.



Comfort by hour and by month. The design opens up the late afternoon in the shoulder seasons. Analysis output — computed from project data.

4. The activation calendar, derived from that

Season	Window	Programme
Oct – Apr (shoulder and winter)	16:00 – 21:00, and weekend mornings	Community events on the plaza and event lawn, evening souk trading, outdoor fitness classes, weekend family programming
May – Sep (summer)	Before 09:00 and after 18:00 only	Early running on Al Madar, evening use of the basin and the crescent walk, night programming on the plaza. **Nothing is scheduled outdoors at midday.**

Committing to a quiet summer midday is a design position, not a gap. Programming an outdoor event into a 56 °C heat index would be a scheduling decision that the analysis in this submission directly contradicts. The park is designed so that the hours it does claim are real.

5. Comfort, accessibility and inclusion

- The site is level, so the whole park is step-free. The only change of level in the scheme is the Oasis Basin, which is ramped.
- Every room is reached from the shaded primary route by a single alley — no room requires crossing another to arrive.
- Shaded rest (the majlis pods) is never far from the walk, so a user who needs to stop can always reach shade.
- 6 drinking fountains and 2 universally accessible restroom blocks are distributed against actual dwell points, not spaced evenly for the drawing.
- Play is divided by age group, with family seating in shade and clear sightlines to both zones.

6. Day and night

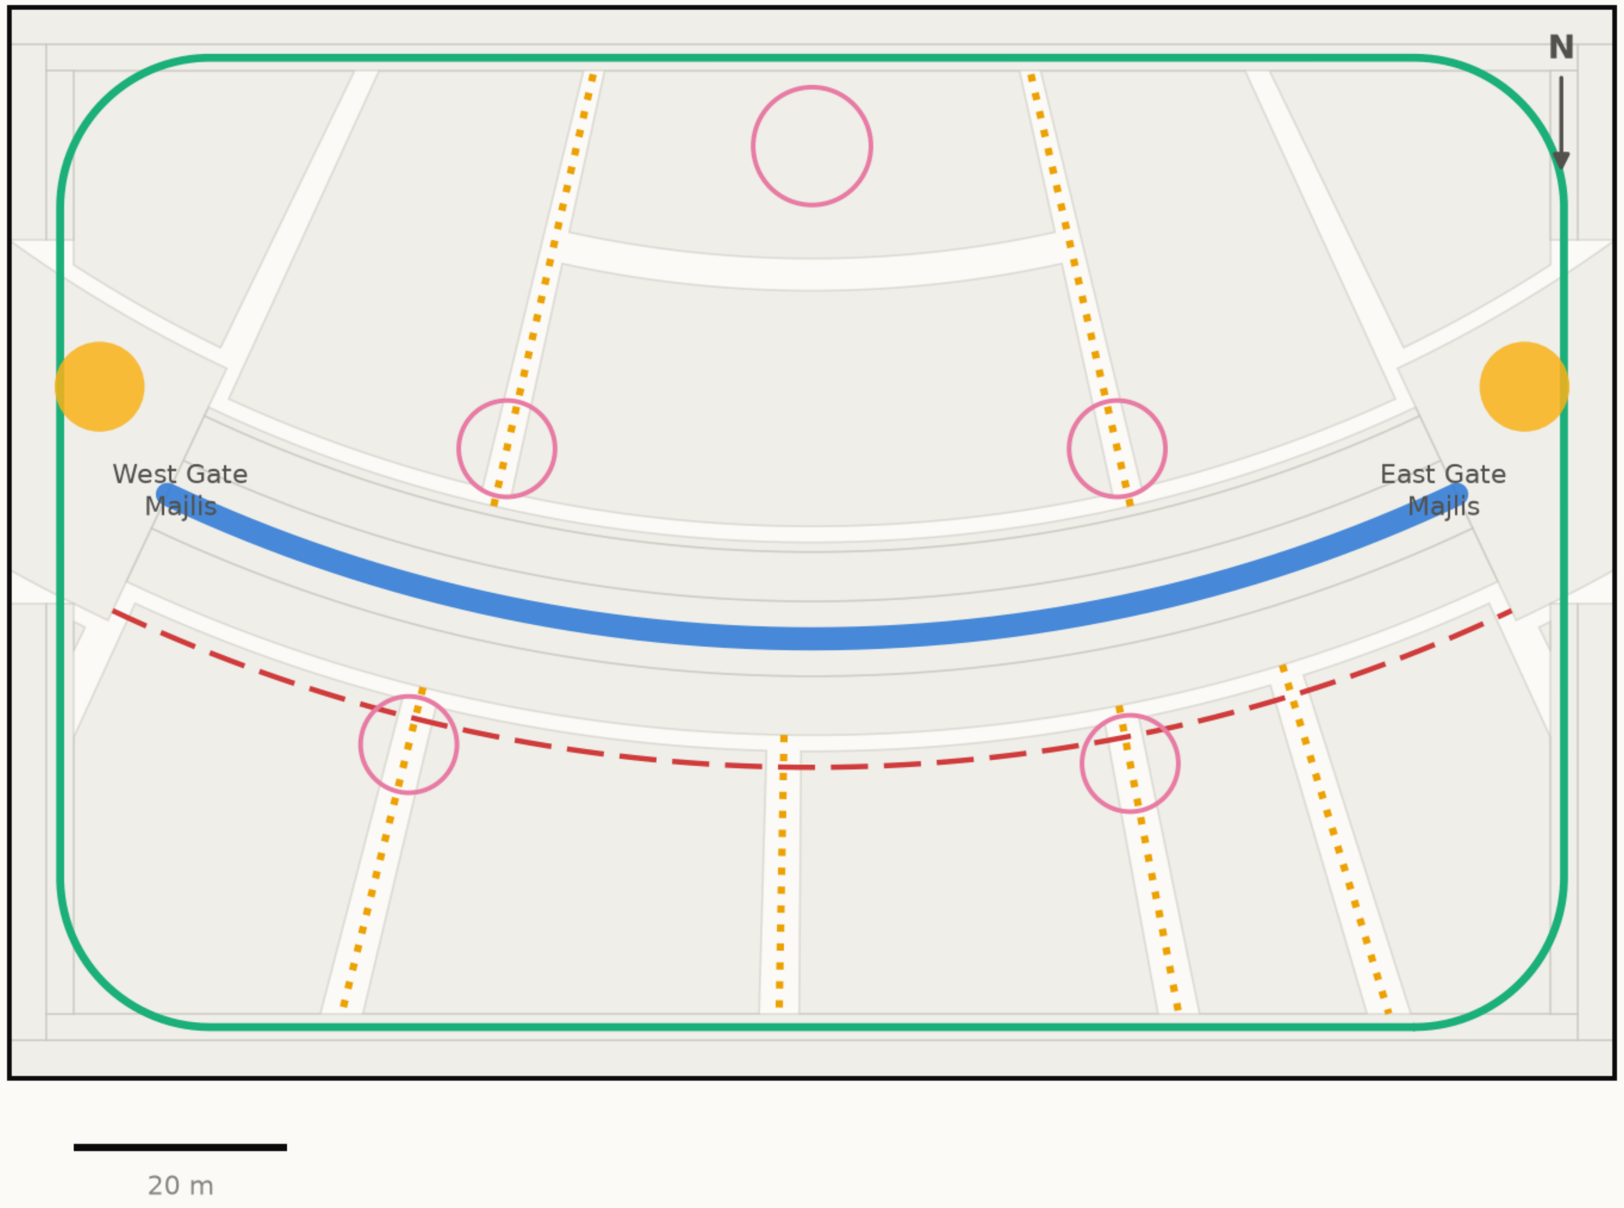
The brief asks for a park that works across the whole day. The convex face carries the uses that run after dark — the plaza, the event lawn and the souk — because its exposure stops being a liability once the sun is down. The crescent is lit from within so the arc reads at night as it does by day, and Al Madar is lit at ankle height for early and late running.

Circulation

Technical drawing — to scale.

Circulation & accessibility

One shaded primary route, radial alleys off it, and a running loop around the whole



Al Mamsha — primary route, shaded, step-free

Al Sikkak — shaded alleys to the rooms

Al Madar — 438 m running loop

Service / emergency vehicle access

Majlis — shaded rest, never more than 33 m from the walk

Every room is reached from the shaded route by one alley. The site is level, so the whole park is step-free; the only change of level in the scheme is the Oasis Basin, which is ramped.

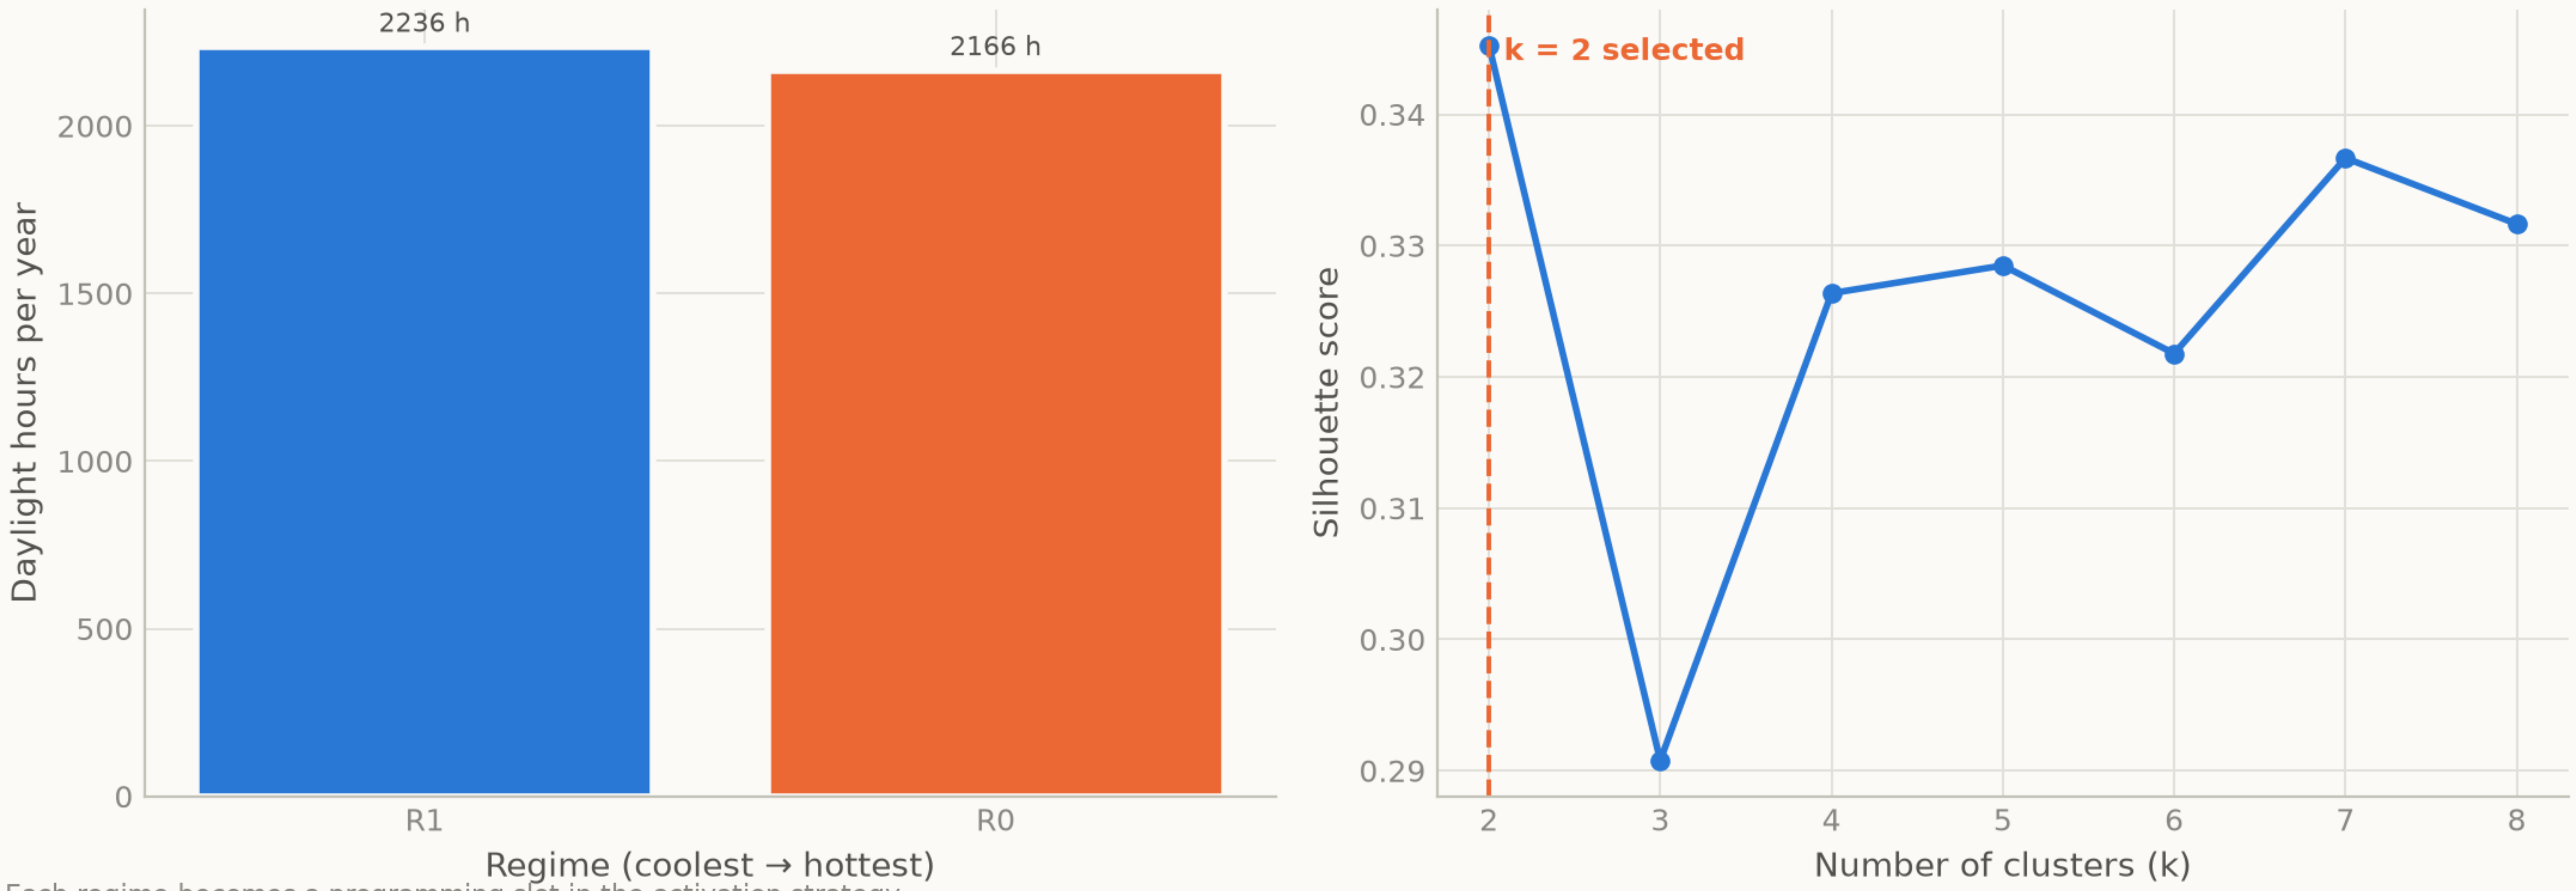
Source: src/plan.py — routes are the drawn geometry, not a sketch over it · Al Safa 2 Park · Falaj Al Safa · Dubai Municipality AI Design Challenge

Fig08 microclimate regimes

Analysis output — computed from project data.

The park's 2 operating regimes, found by clustering

k selected by silhouette score, not chosen — daylight hours only



Each regime becomes a programming slot in the activation strategy.

These are the values the pipeline wrote on its last run, read straight out of the files it produced. The commands below regenerate every one of them from the published repository.

THE FIGURES THIS FILE LEADS ON

each one appears in the full tables below, from the same file

64.6% COMFORTABLE AS DESIGNED

+20.1 pts COMFORT HOURS GAINED

4,402 DAYLIGHT HOURS MODELLED

97.5% COMFORT BAND ACCURACY

MEASURED RESULT

models/headline_metrics.json

Annual daylight hours modelled	4,402
Comfortable daylight hours — today	44.5%
Comfortable daylight hours — as designed	64.6%
Mean heat-index reduction under canopy	7.13 °C
Peak heat index, exposed	56.8 °C
Peak heat index, shaded	48.7 °C
Crescent Walk shaded, canopy and louvre	87.3%
Site-wide mean shade	34.1%
Trees planted	131

TRAINED MODELS, ON HELD-OUT TEST SETS

models/model_metrics.json

M1a Random Forest — shade surrogate, test R^2	0.9982
M1b Neural network — deployed surrogate, test R^2	0.9944
M2 Gradient Boosting — comfort band, test accuracy	97.5%
M3 K-Means — regimes selected by silhouette	k = 2
Training / validation / test split	10,500 / 2,250 / 2,250
Random seed, fixed for reproducibility	42

WHAT THE CHECKS PROTECT

each one asserts what would otherwise drift silently

Climate fidelity
the modelled year reproduces the published normals it was built from

No overlaps
no room in the schedule overlaps another

Areas close
every area sums back to 15,000 m²

Budget held
the cost plan stays inside AED 35 M

No leakage
no model can see its own answer in its inputs

RUN IT YOURSELF

```
git clone https://github.com/wasim437/Al_SAFA.git
pip install -r requirements.txt
python run_analysis.py            # data, models, figures
python -m tests.test_pipeline     # 41 correctness checks
node docs/_PORTAL/selftest.js     # 64 portal checks
node tests/test_film.js           # every frame of the film
```

The complete project, and where to check it

Every one of the 120 links below is live. The repository holds the data as issued and as processed, the code, the trained models, the drawings and the tests, and it runs end to end with one command. A juror who wants to know where a number came from can be given a file path rather than an opinion.
