01 WHAT IS IN THIS FILE

Phase6 Detailed Design Report	DRAWING
Elevation	DRAWING
Section	DRAWING

02 THE SCALE OF THE ANALYSIS BEHIND IT

39 years of climate normals (NCM, 1977–2015) rebuilt into an 8,760-hour modelled year

8,760 hours of sun position ray-traced against 131 trees for every hour of the year

15,000 one-metre ground cells modelled for shade and comfort, site-wide

4 models trained and tested for leakage — two of them decide what this document reports

41 checks run on every rebuild, so a wrong number fails loudly instead of shipping quietly

VERIFY THIS DOCUMENT

Every quantity in this file is regenerated from data by code. Nothing is typed by hand.

Repository	github.com/wasim437/Al_SAFA
Live portal	wasim437.github.io/Al_SAFA/
Produced by	CODE src/drawings.py src/solar.py src/config.py
Reproduce	`python run_analysis.py` · `python -m tests.test_pipeline`

Generated 2026-08-06 · reproducible with python tools/build_submission_pdfs.py

HOW THIS DOCUMENT WAS PRODUCED

A ten-phase process, checked at every step

Nothing downstream is hand-drawn or hand-typed — change an input and every figure moves with it, or a test fails loudly.

01 THE TEN PHASES

P1 Site & Context Analysis
39 years of NCM normals rebuilt into an 8,760-hour year, verified back to within 0.39 °C; sun position for every hour via NREL/pvlib; shadow geometry; 7,640 residents inside a ten-minute walk

P2 Problem Definition
Phase 1 findings turned into problems and scored by severity rather than listed flat — thermal discomfort dominates everything else

P3 Opportunity & Objectives
The ranked problems converted into measurable targets, including the comfort-hours target the finished design is scored against

P4 Concept Development
Multiple plan forms generated and swept against the solar model; the crescent selected on hours-with-no-shade, not on mean coverage

P5 Masterplan Development
Every room struck off the crescent's centre; areas taken as the shoelace area of the drawn polygon, so the schedule closes on 15,000 m²

P6 **Detailed Design** THIS DOCUMENT
The canopy section solved against shadow geometry — 7 m walk, 18 m gridshell at 4.5 m, 3 m southern louvre; 131 trees at mature canopy

P7 Performance & Sustainability
Water balance, carbon, the canopy PV deficit, and ray-traced shade performance by zone

P8 User Experience & Activation
K-Means microclimate regimes and the hour-by-month comfort surface; programming targeted at late afternoon, spring and autumn

P9 AI Workflow & Visualisation
The four models and the anti-leakage discipline; drawings, boards, the analytics portal and the sixty-second film

P10 Submission Assembly
Every report and visual mapped onto the twelve upload slots, each with a manifest naming what produced it

UPLOAD SLOT 04 OF 12 · KEY SECTIONS, ELEVATIONS & MATERIAL PALETTE

Key Sections, Elevations & Material Palette

The canopy section solved against the shadow geometry

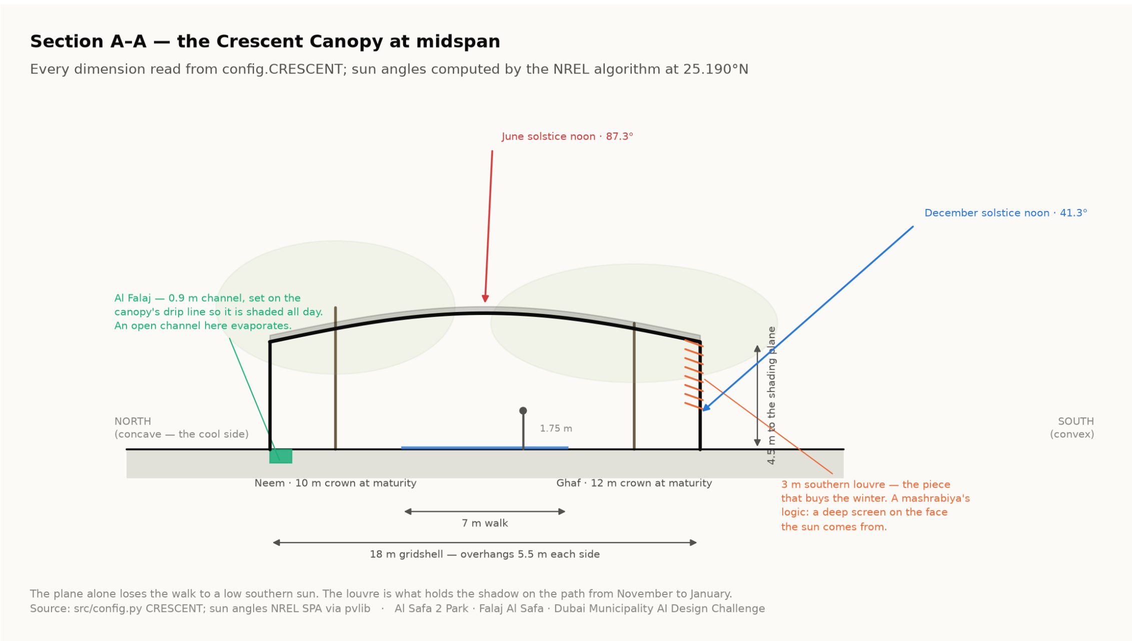
This is the drawing the whole scheme rests on: a 7 m walk under an 18 m gridshell at 4.5 m, with a 3 m louvre on the southern face. Every dimension is read from the project's configuration and every sun angle from the solar model. None of it is drawn by eye.

Al Safa 2 Park · **Falaj Al Safa** · 15,000 m² · Al Safa 2, Dubai · Mohamed Wasim, Individual Applicant · Issued 05 August 2026 · every quantity regenerated by `python run_analysis.py`

1. The section, and the problem it solves

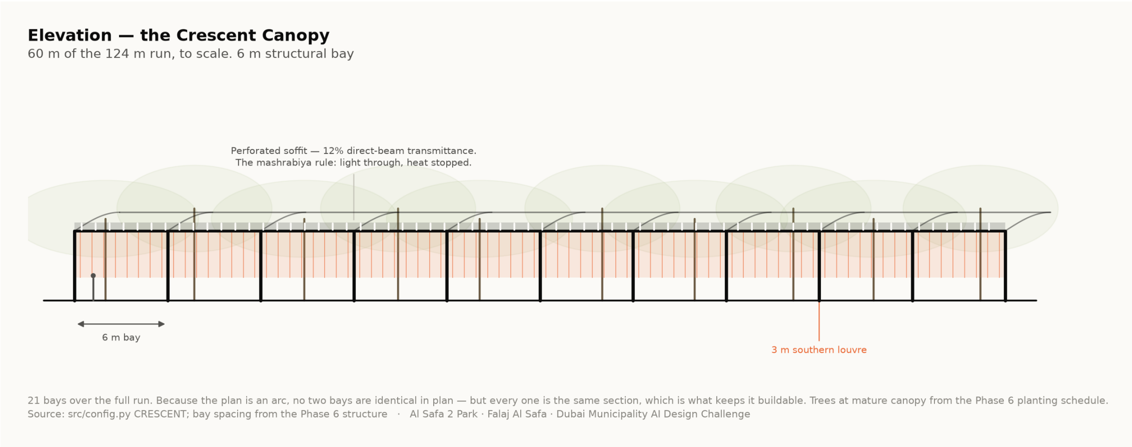
A flat canopy fails in a specific and predictable way. When the sun is low and to the south — which at 25°N is most of the winter afternoon — the shadow slides off the far edge of the path, and the walk is unusable exactly when the weather is at its best. An earlier version of this project claimed 99.2% annual shade on such a canopy. It was withdrawn.

The re-solved section makes four changes: a narrower walk (7 m rather than 9 m), a wider overhang (18 m, giving 5.5 m each side), a lower plane (4.5 m), and a 3 m vertical louvre on the southern face. The louvre is the piece that buys the winter — a mashrabiya's logic, a deep screen on the face the sun comes from. The section now measures 87.3%.



Section A–A at midspan. Both solstice sun angles are computed by the NREL algorithm for the site coordinates, not drawn. Technical drawing — to scale.

2. Elevation and structural rhythm



Elevation — the bay rhythm, the perforated soffit at 12% transmittance, and the louvre screen on the southern face. Technical drawing — to scale.

The gridshell spans 18 m on regular structural bays. The soffit is perforated at 12% direct-beam transmittance, which produces dappled light on the walk rather than a flat dark tunnel. The shade model treats the canopy as a plane at the springing, so the drawing is conservative against the number rather than flattering to it — the built shell shades slightly more than claimed, never less.

3. Why the tree avenue exists

Shadow length is height divided by the tangent of solar elevation. At Dubai's summer noon a 6 m tree casts a 0.19 m shadow; at 20° elevation the same tree casts 16.5 m. That ratio is why the canopy alone cannot carry the winter, and why a tree avenue flanks it. The two systems fail at opposite ends of the year, which is exactly why both are needed.

4. Material and landscape palette

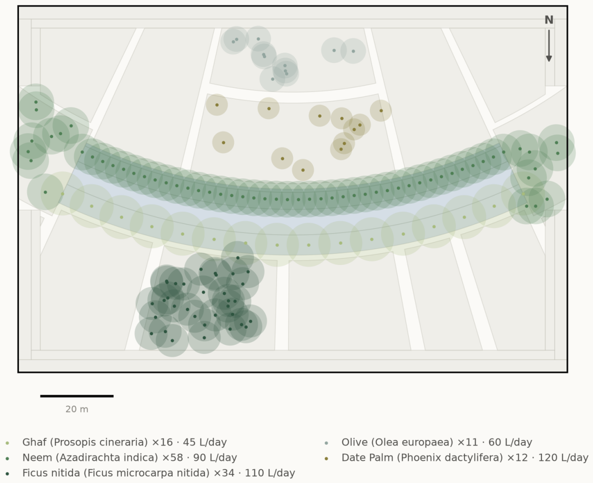
- **Structure** — steel gridshell, light-toned, with a perforated metal soffit; weathered bronze for the louvre fins.
- **Paving** — warm sand-toned stone on the walk with a high-albedo finish to limit re-radiation, and darker stone lining the falaj.
- **Earth** — Al Kathib is planted earth, not a wall. Cut and fill are balanced on site where possible.
- **Planting** — five desert species only. Ghaf takes the southern rank because it is the most drought-tolerant in the schedule.

Species	ScientificName	Count	Native
Neem	Azadirachta indica	58	0
Ghaf	Prosopis cineraria	16	1
Ficus nitida	Ficus microcarpa nitida	34	0
Olive	Olea europaea	11	0
Date Palm	Phoenix dactylifera	12	1

131 trees. Source: data/raw/species_water_carbon_rates.csv.

Planting plan — 131 trees

Drawn at mature canopy radius. The avenue is structural: it carries the shoulder seasons the gridshell cannot



28 of 131 trees are UAE natives (Ghaf and Date Palm). Peak summer irrigation demand 11.8 m³/day. Ghaf takes the southern rank because it is the most drought-tolerant species in the schedule and that rank is the more exposed of the two.
Source: data/raw/species_water_carbon_rates.csv; layout from src/solar.py · Al Safa 2 Park · Falaj Al Safa · Dubai Municipality AI Design Challenge

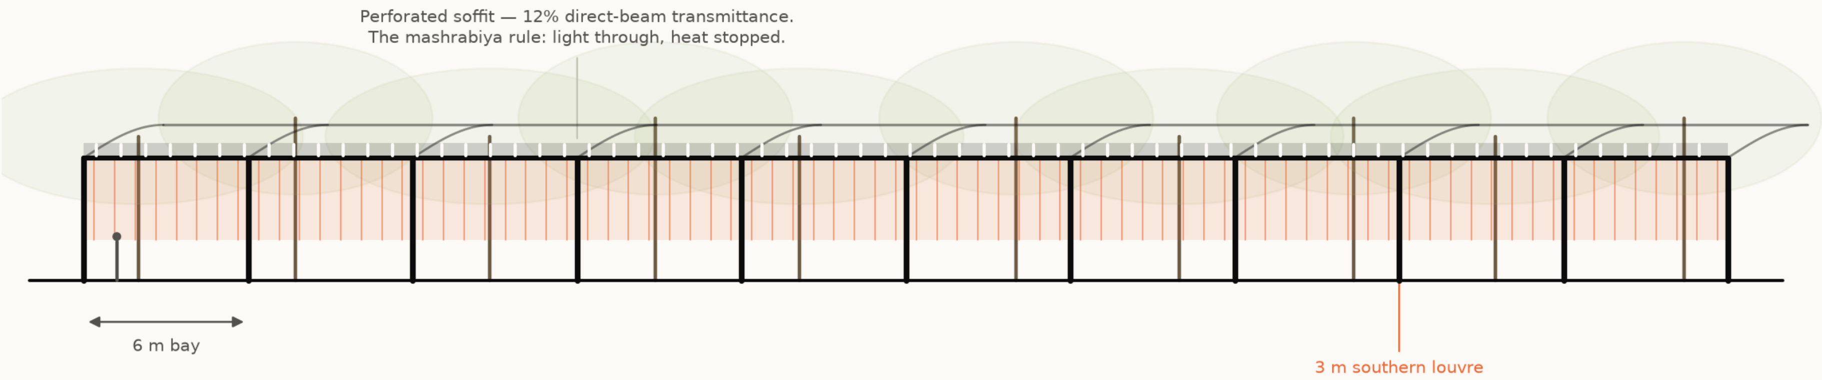
Planting plan — 131 trees drawn at mature canopy radius. Technical drawing — to scale.

Elevation

The structural bay repeated along the arc — one section, 21 bays

Elevation — the Crescent Canopy

60 m of the 124 m run, to scale. 6 m structural bay



21 bays over the full run. Because the plan is an arc, no two bays are identical in plan — but every one is the same section, which is what keeps it buildable. Trees at mature canopy from the Phase 6 planting schedule.
Source: src/config.py CRESCENT; bay spacing from the Phase 6 structure · Al Safa 2 Park · Falaj Al Safa · Dubai Municipality AI Design Challenge

EVIDENCE THE PIPELINE RAN

Proof the analysis runs, and what it reports

These are the values the pipeline wrote on its last run, read straight out of the files it produced. The commands below regenerate every one of them from the published repository.

THE FIGURES THIS FILE LEADS ON

each one appears in the full tables below, from the same file

2,595 m²
CANOPY AREA

87.3%
CRESCENT WALK SHADED

48.7 °C
PEAK HEAT INDEX, SHADED

144 m
CRESCENT ARC LENGTH

MEASURED RESULT

models/headline_metrics.json

Annual daylight hours modelled	**4,402**
Comfortable daylight hours — today	**44.5%**
Comfortable daylight hours — as designed	**64.6%**
Mean heat-index reduction under canopy	**7.13 °C**
Peak heat index, exposed	**56.8 °C**
Peak heat index, shaded	**48.7 °C**
Crescent Walk shaded, canopy and louvre	**87.3%**
Site-wide mean shade	**34.1%**
Trees planted	**131**

TRAINED MODELS, ON HELD-OUT TEST SETS

models/model_metrics.json

M1a Random Forest — shade surrogate, test R^2	**0.9982**
M1b Neural network — deployed surrogate, test R^2	**0.9944**
M2 Gradient Boosting — comfort band, test accuracy	**97.5%**
M3 K-Means — regimes selected by silhouette	**k = 2**
Training / validation / test split	**10,500 / 2,250 / 2,250**
Random seed, fixed for reproducibility	**42**

WHAT THE CHECKS PROTECT

each one asserts what would otherwise drift silently

Climate fidelity
the modelled year reproduces the published normals it was built from

No overlaps
no room in the schedule overlaps another

Areas close
every area sums back to 15,000 m²

Budget held
the cost plan stays inside AED 35 M

No leakage
no model can see its own answer in its inputs

RUN IT YOURSELF

```
git clone https://github.com/wasim437/Al_SAFA.git
pip install -r requirements.txt
python run_analysis.py          # data, models, figures
python -m tests.test_pipeline   # 41 correctness checks
node docs/_PORTAL/selftest.js   # 64 portal checks
node tests/test_film.js         # every frame of the film
```

The complete project, and where to check it

Every one of the 125 links below is live. The repository holds the data as issued and as processed, the code, the trained models, the drawings and the tests, and it runs end to end with one command. A juror who wants to know where a number came from can be given a file path rather than an opinion.
