SCHEDULE 1

GENERAL DESCRIPTION OF THE DESIGN CHALLENGE

A. Introduction

Dubai Municipality's AI Park Design Challenge, is an initiative that explores the potential of artificial intelligence to support, inspire, and enhance the design of public spaces.

The Design Challenge is founded on the principle that human experience and community participation should remain at the heart of creating public spaces. While artificial intelligence offers new opportunities for analysis, ideation, and exploration, the role of technology is to augment and empower designers, enabling them to create more inclusive, responsive, and meaningful environments.

Participants are invited to demonstrate how artificial intelligence can be employed throughout the design process to better understand people and places, analyze environmental and spatial conditions, generate and test design alternatives, unlock creativity, and support evidence-based decision-making.

The design challenge encourages participants to use AI not merely as a visualization tool, but as a **catalyst for innovation and creativity**, enabling the development of bold ideas, strong concepts, and transformative visions for the future of public spaces.

Through this initiative, Dubai Municipality seeks to attract innovative and forward-thinking proposals that:

- Place people and communities at the center of design decisions;
- Demonstrate meaningful and responsible integration of artificial intelligence;
- Promote sustainability, inclusivity, and quality of life;
- Celebrate local identity and create a strong sense of place; and
- Inspire new approaches to designing the public spaces and cities of the future.

At its core, the challenge is founded on the belief that the best public spaces are shaped by the people who use them. Accordingly, all submissions will be evaluated by an independent jury comprising leading local and international experts from the fields of architecture, urban design, landscape architecture, technology,

AI Park Design Challenge

and innovation along with executive directors across various entities in Dubai Government. The jury will assess submissions against a set of predefined criteria and select a shortlist of outstanding proposals.

In a unique celebration of participatory design and community engagement, the shortlisted proposals will then be presented to the public, empowering residents and communities to participate in selecting the winning design. Through this process, the challenge seeks to demonstrate that the future of public space design lies in the intersection of **artificial intelligence, human creativity, expert knowledge, and community participation**.

This challenge aims to use artificial intelligence as a **design support and decision-making tool**, rather than as an end product or a requirement to incorporate AI technologies within the park itself. Participants are encouraged to leverage AI throughout the design process—including research, site analysis, data interpretation, ideation, scenario testing, visualization, and evaluation—to enhance creativity, inform design decisions, and develop more human-centered, sustainable, and implementable proposals. The focus of the challenge is on how AI can augment the designer's process and contribute to better public space outcomes, not on embedding artificial intelligence features or technologies within the final park design.

Level of Submission: Submissions shall include both **Concept Design and Preliminary Design proposals**, demonstrating the overall vision, spatial organization, key design components, and preliminary development of the proposed park. Detailed design and construction documentation are not required at this stage.

The Dubai Municipality AI Design Challenge aims to establish a new model for designing public spaces—one that brings together technology and people to create innovative, inclusive, and future-ready environments, while further reinforcing Dubai's position as a global platform for urban innovation and the design of future cities.

B. About The park

The Design Challenge invites participants to develop a concept and preliminary design proposal for the redevelopment of a 15,000-square-metre neighborhood park in Al Safa 2, Dubai. The project presents an opportunity to reimagine the future of neighborhood parks by creating an innovative, inclusive, and sustainable public space that enhances quality of life, promotes health and well-being, and strengthens community connections. The existing park is planned to be redeveloped into a vibrant, human-centered destination that responds to the evolving needs and aspirations of the community.

AI Park Design Challenge

Participants are encouraged to explore how emerging technologies, particularly Artificial Intelligence, can support the design process to create human-centered, resilient, and adaptable environments that respond to the needs of diverse users. The proposed park should provide a memorable and engaging experience for all ages, foster social interaction and community participation, and contribute to Dubai's vision of creating vibrant, livable, and future-ready neighborhoods.

The appendix contains the site CAD files, project boundaries, available site information, and the as-built drawings of the existing park to support the preparation of the concept and preliminary design proposal.

Design Elements (Project Space Program):

A. Design Requirements and Project Space Program

The proposed park and public space design shall respond to the objectives of the Dubai Municipality AI Design Challenge and demonstrate innovative, human-centered, and sustainable approaches to public space design through the meaningful integration of artificial intelligence.

The design proposal shall incorporate a balanced mix of active, passive, recreational, and community-oriented spaces and, at a minimum, consider the inclusion of the following elements, without limiting participants' creativity and innovation:

- Walking and jogging tracks.
- Children's play areas for different age groups.
- Shaded seating and gathering spaces.
- Landscaped green areas and open lawns.
- Community plazas and flexible event spaces.
- Family picnic and social interaction areas.
- Outdoor fitness and wellness spaces.
- Universal accessibility and inclusive design features.
- Public amenities and services, including restrooms and drinking fountains.
- Wayfinding, lighting, and safety features.
- Sustainable and climate-responsive landscape strategies.

Participants are encouraged to propose additional elements, programs, and innovative interventions that enhance user experience, foster community interaction, strengthen local identity, and contribute to creating inclusive, future-ready, and memorable public spaces.

Indicative Park Program Requirements

AI Park Design Challenge

The proposed park design shall respond to the principles of human-centered design and provide a balanced mix of active, passive, recreational, social, and environmental spaces. The program outlined below is indicative and intended to guide participants while allowing flexibility and innovation in the final design proposal.

1. Arrival and Accessibility

- Main entrance plaza and gateway feature
- Secondary access points
- Universal accessibility and barrier-free design
- Bicycle parking and drop-off areas
- Connections to surrounding streets and neighborhoods

2. Walking and Movement

- Walking paths and promenade network
- Jogging track (approximately 1 km or as appropriate to the site)
- Internal circulation routes
- Shaded pedestrian connections
- Wayfinding and orientation elements

3. Children's Play Areas

- Inclusive children's playground
- Play opportunities for different age groups
- Nature play and interactive play features
- Family seating adjacent to play areas

4. Sports and Active Recreation

- Outdoor fitness and exercise stations
- Flexible open spaces for recreational activities
- Multipurpose lawn and activity spaces
- Wellness and exercise areas

5. Community and Social Spaces

- Community plaza and gathering space
- Flexible event lawn
- Family picnic areas
- Social seating and meeting areas

AI Park Design Challenge

- Spaces for community activities and small events

6. Landscape and Green Infrastructure

- Landscaped green areas and open lawns
- Native and climate-responsive planting
- Tree canopy and shaded areas
- Biodiversity and habitat enhancement features
- Sensory and therapeutic landscapes where appropriate

7. Seating and Comfort

- Shaded seating areas
- Quiet contemplation spaces
- Viewing and resting areas
- Social seating nodes distributed throughout the park

8. Amenities and Services

- Public restrooms
- Drinking fountains
- Café or refreshment kiosk (optional)
- Service and maintenance facilities
- Waste and recycling stations

9. Sustainability and Resilience

- Water-sensitive landscape design
- Sustainable irrigation strategies
- Energy-efficient lighting
- Nature-based solutions and climate adaptation measures
- Resource-efficient and low-maintenance design strategies

10. Smart and Innovative Features

- Integration of smart technologies and digital experiences
- Monitoring and management systems
- Interactive elements
- Innovative solutions that enhance user experience and park operations

B. Scope of Work

The Design Challenge consists of two design stages: **Concept Design** and **Preliminary Design**. Participants are expected to demonstrate how artificial intelligence can be meaningfully integrated throughout both stages to support analysis, ideation, design development, and decision-making while maintaining human creativity and professional judgment.

The Design Challenge seeks proposals that demonstrate both a compelling conceptual vision and an appropriate level of preliminary design development. Participants are expected to leverage artificial intelligence as an enabling tool throughout the design process while maintaining human creativity, community participation, and professional judgment at the center of decision-making taking.

Proposals should present innovative, human-centered, and implementable concepts that respond to the needs of future public spaces in Dubai. Participants are also required to consider the project's total implementation budget of AED 35 million and demonstrate the feasibility, scalability, and practicality of their proposals within this financial framework for the redevelopment of the 15,000-square-metre site.

B.1. Concept Design Development

The Concept Design stage shall establish the vision, identity, and guiding principles of the proposed park and public space. The scope shall include, but not be limited to, the following:

1. Site Understanding and Context Analysis

- Analysis of the site's physical, environmental, and urban context.
- Assessment of opportunities and constraints.
- Analysis of surrounding land uses and neighborhood characteristics.
- Review of existing access, connectivity, and mobility patterns.
- Analysis of climatic conditions, including solar exposure, shade, wind, thermal comfort, and environmental conditions.
- Identification of existing natural assets and ecological opportunities.

AI Park Design Challenge

2. User and Community Analysis

- Identification of key user groups and stakeholders.
- Understanding of community needs, aspirations, and behaviors.
- Development of user personas and experience scenarios.
- Identification of opportunities for social interaction and community activation.
- Consideration of the needs of children, youth, families, older adults, and People of Determination.

3. Human-Centered Design Strategy

- Development of design principles centered around people and community well-being.
- Placemaking and sense of belonging strategy.
- Inclusivity and universal accessibility approach.
- Health, wellness, and quality of life objectives.
- Safety, comfort, and intergenerational design objectives.

4. Artificial Intelligence Integration

Participants shall demonstrate how AI has been utilized to:

- Support site and user analysis.
- Generate and test design alternatives.
- Explore multiple scenarios and possibilities.
- Support evidence-based decision-making.
- Enhance environmental analysis and performance optimization.
- Unlock creativity and support the development of innovative concepts.
- Communicate and visualize design ideas.

5. Design Vision and Concept Development

- Development of a strong design narrative and vision statement.
- Creation of an overarching concept and identity for the park.
- Development of placemaking and experiential strategies.
- Conceptual organization of spaces and activities.
- Integration of local identity and cultural context.

AI Park Design Challenge

6. Sustainability and Resilience Framework

- Environmental sustainability objectives.
- Climate-responsive design principles.
- Water-sensitive and resource-efficient approaches.
- Long-term resilience and adaptability objectives.

7. Concept Design Deliverables

- Design vision and narrative.
- Site analysis and opportunities and constraints assessment.
- User analysis and community needs assessment.
- Concept diagrams and strategy diagrams.
- AI methodology and workflow.
- Concept masterplan.
- Spatial framework and zoning diagrams.
- Concept landscape strategy.
- Preliminary sustainability and resilience strategy.
- User experience and accessibility strategy.
- Illustrative renderings and visualizations.
- One-minute concept animation.

B.2. Preliminary Design Development

The Preliminary Design stage shall translate the conceptual vision into a coordinated and functional design proposal and demonstrate the project's feasibility, usability, and implementation potential.

1. Master Planning and Spatial Organization

- Development of the detailed masterplan of the park.
- Spatial organization and hierarchy of spaces.
- Development of the park's functional relationships and user flows.

AI Park Design Challenge

2. Landscape and Public Realm Design

- Development of landscape character and identity.
- Design of open spaces and green areas.
- Development of pathways and promenades.
- Design of community plazas and gathering spaces.
- Design of family and social spaces.
- Development of play and recreational areas.
- Integration of seating and shaded areas.

3. Circulation and Accessibility

- Detailed pedestrian circulation strategy.
- Jogging and walking track design.
- Bicycle access and parking strategy.
- Universal accessibility and inclusive design measures.
- Access and service strategy.
- Safety and security considerations.

4. Park Amenities and Facilities

- Children's play areas.
- Outdoor fitness and wellness areas.
- Event and multipurpose spaces (if applicable)
- Public amenities and services.
- Wayfinding and information systems.
- Service and maintenance facilities.

5. Sustainability and Environmental Design

- Sustainability strategy.
- Landscaping and biodiversity strategy
- Resource efficiency measures.
- Shade and thermal comfort strategies.
- Environmental performance optimization.

AI Park Design Challenge

6. Smart Technologies and AI Applications

- Smart park infrastructure opportunities.
- Proposed Environmental monitoring systems.
- Data-driven park management opportunities.
- Integration of digital technologies that enhance user experience and operations.

7. Feasibility and Implementation

- Constructability considerations as per the highlighted budget.
- Operational requirements/Maintenance Strategy.
- Adaptability and future expansion opportunities.
- Preliminary phasing and implementation considerations.
- Preliminary cost and resource considerations.

8. Preliminary Design Deliverables

- Preliminary masterplan and site plan.
- General arrangement plans.
- Landscape plans.
- Preliminary circulation plans.
- Key sections and elevations.
- Public realm and spatial character plans.
- Accessibility strategy.
- Sustainability and resilience strategy.
- Smart technologies strategy.
- Material & landscape palette and design language.
- Detailed renderings and visualizations.
- User journey and experience diagrams.
- Preliminary implementation and phasing strategy.
- Documentation demonstrating the role of AI throughout the design process and its contribution to the final design outcome.

The level of design development should be sufficient to communicate the project's vision, functionality, and implementation potential while preserving the innovative and exploratory nature of the Design Challenge.

C. Integration and Use of Artificial Intelligence

The Dubai Municipality AI Design Challenge seeks to explore how artificial intelligence can be used as an enabling and supportive tool throughout the design process while ensuring that human creativity, professional judgment, and community participation remain at the center of decision-making.

Participants are encouraged to leverage artificial intelligence not merely as a visualization tool, but as a catalyst for creativity, innovation, and evidence-based design thinking. AI should be used to augment the designer's capabilities, unlock new possibilities, and support the development of more responsive, inclusive, and sustainable public spaces.

Objectives of Using Artificial Intelligence

The use of artificial intelligence within the Design Challenge aims to:

- Enhance the understanding of people, places, and communities.
- Support data-driven and evidence-based design decisions.
- Unlock creativity and generate innovative ideas and design concepts.
- Explore and evaluate multiple design scenarios and alternatives.
- Improve environmental performance and sustainability outcomes.
- Enhance user experience and the quality of public spaces.
- Support communication and visualization of design proposals.

Areas of Application

Participants shall utilize artificial intelligence throughout the design process, including, but not limited to, the following:

1. Site and Context Analysis

- Site data analysis and interpretation.
- Analysis of land use, mobility, and connectivity.
- Identification of opportunities and constraints.
- Mapping and visualization of spatial information.

AI Park Design Challenge

2. User and Community Analysis

- Understanding user needs and behaviors.
- Development of user personas and experience scenarios.
- Identification of community aspirations and preferences.
- Analysis of accessibility and inclusivity considerations.

3. Environmental Analysis

- Solar and shade analysis.
- Wind and microclimate studies.
- Thermal comfort analysis.
- Environmental performance simulations.

4. Design Ideation and Concept Generation

- Generation of design alternatives.
- Exploration of multiple scenarios and possibilities.
- Development of innovative and transformative concepts.
- Support for creative thinking and design exploration.

5. Design Development and Optimization

- Testing and refinement of design options.
- Performance-based design optimization.
- Spatial organization and programming studies.
- Evaluation of functionality and user experience.

6. Sustainability and Resilience

- Resource efficiency and circular design strategies.
- Climate adaptation and resilience measures.
- Biodiversity and ecological enhancement opportunities.
- Environmental impact assessment and optimization.

AI Park Design Challenge

7. User Experience and Decision-Making

- Analysis of movement patterns and user journeys.
- Evaluation of accessibility and inclusivity.
- Simulation of user interactions and experiences.
- Support for evidence-based design decisions.

8. Visualization and Communication

- Creation of diagrams and visualizations.
- Development of renderings and animations.
- Communication of design concepts and narratives.
- Presentation of design alternatives and scenarios.

Architecture and Landscape Design

The proposed park and public space design shall reflect a strong and innovative design vision that balances functional, social, environmental, economic, and aesthetic considerations. The design should create a distinctive sense of place while responding to the needs, aspirations, and well-being of the community.

The proposed design shall be:

- **Human-centered**, placing people and their experiences at the heart of the design process and promoting health, well-being, and meaningful interactions.
- **Family-oriented and family-friendly**, creating safe, welcoming, and engaging environments that cater to the needs of children, youth, adults, and older persons, while encouraging intergenerational interaction and community gathering.
- **Innovative and forward-thinking**, demonstrating creative approaches to public space design and the meaningful integration of artificial intelligence.
- **Functional and efficient**, ensuring the optimal organization of spaces, activities, amenities, and circulation systems.
- **Inclusive and universally accessible**, accommodating people of all ages and abilities, including People of Determination, in accordance with national and international accessibility standards.
- **Environmentally sustainable and climate-responsive**, integrating nature-based solutions, biodiversity enhancement, and resource-efficient strategies.
- **Comfortable and safe**, providing shaded environments, thermal comfort, security, and high-quality user experiences throughout the year.

AI Park Design Challenge

- **Flexible and adaptable**, capable of accommodating a variety of recreational, cultural, educational, and community activities and responding to changing needs over time.
- **Maintainable and operationally efficient**, considering long-term management, maintenance, and lifecycle requirements.
- **Technologically enabled and future-ready**, exploring smart technologies enhance the performance, management, and experience of the park.
- **Reflective of local identity and culture**, creating memorable places that celebrate Dubai's character, strengthen community belonging, and foster a sense of place.

The proposed design should demonstrate how artificial intelligence has been employed not only to improve efficiency, but also to unlock creativity, explore new possibilities, support evidence-based decision-making, and contribute to the creation of innovative, inclusive, resilient, and future-ready public spaces.

C. Functionality and User Experience

- The design proposal shall fulfill the space requirements and indicative park program outlined in the Design Challenge Brief.
- The park shall be functional and efficient in its layout, circulation, and organization of activities and amenities.
- The design shall provide a balanced mix of active, passive, recreational, social, and environmental spaces.
- The park shall accommodate a variety of uses and activities for different age groups and user needs.
- The design shall support flexibility and adaptability to accommodate community events, cultural activities, and changing future needs.
- The proposal shall promote health, well-being, social interaction, and meaningful community experiences.
- The design shall demonstrate how artificial intelligence has informed the planning and organization of spaces, user experience, and decision-making.
- The design shall deliver a seamless day-to-night experience, ensuring that the park remains active, welcoming, and inclusive throughout different times of the day and across all seasons.

AI Park Design Challenge

D. Accessibility and Inclusivity

- The project shall be designed in accordance with universal design principles and provide equitable access for all users, including People of Determination.
- The design shall provide safe, intuitive, and accessible circulation throughout the park.
- The proposal shall consider the needs of children, youth, families, older adults, and People of Determination.
- The design shall provide a comfortable and inclusive user experience and encourage intergenerational interaction.
- The proposal shall demonstrate how AI and data-driven approaches have been used to improve accessibility and user experience.

E. Commercial and Service Facilities

- The proposal shall incorporate complementary commercial and service facilities that enhance the park experience and support year-round activation.
- Commercial uses shall be carefully integrated within the overall park design and shall not compromise the environmental, recreational, or community character of the park.
- The design shall include appropriate visitor amenities and support facilities, such as food and beverage outlets, retail kiosks, public conveniences, information points, and operational facilities.
- The proposal shall demonstrate how commercial and service components contribute to the long-term economic viability, operation, and maintenance of the park.
- The proposal shall include a Commercial and Service Facilities Map illustrating the location, distribution, and integration of the proposed commercial and service uses within the park and its surrounding context.

F. Access, Mobility and Parking

- The design shall consider pedestrian, cycling, and vehicular access to and from the site.
- Appropriate drop-off, pick-up, and parking arrangements shall be considered in accordance with local regulations.
- Bicycle parking and sustainable mobility solutions are encouraged.
- Service and maintenance access requirements shall be considered.
- The proposal shall ensure safe movement and clear circulation for all users.
- The design should prioritize walkability and encourage active mobility.

G. Safety, Security and Comfort

- The design shall promote safety and security principles where appropriate.
- The proposal shall provide adequate lighting and visibility throughout the park.
- The design shall consider thermal comfort, shading, and year-round usability.

AI Park Design Challenge

- Emergency and service access requirements shall be incorporated into the design.
- The design shall create safe and welcoming environments for all users and activities during both daytime and nighttime.

H. Landscape Character and Public Realm Design

- The design shall create a distinctive sense of place and celebrate local identity and culture.
- The proposal shall incorporate high-quality landscape and public realm design.
- Native and climate-responsive planting strategies are encouraged.
- The design shall integrate shaded seating areas, gathering spaces, and family-friendly environments.
- The proposal shall incorporate biodiversity enhancement and nature-based solutions.
- The design shall demonstrate how landscape, public realm, and built elements work together to create a cohesive and memorable user experience.

I. Sustainability and Smart Solutions

- The proposal shall integrate environmental, social, and economic sustainability principles.
- The design shall consider water-sensitive landscape design, resource efficiency, and low-maintenance strategies.
- Participants are encouraged to explore innovative solutions that enhance park performance, user experience, and long-term resilience.

SCHEDULE 2

REPORTING REQUIREMENTS AND DELIVERABLES

Participants shall submit all required deliverables electronically through the **official Dubai Municipality AI Design Challenge website**, in accordance with the submission requirements and deadlines specified in the Design Challenge Brief and Submission Guidelines.

All submissions shall be uploaded and shall include, but not be limited to, the following:

- Design report and concept narrative.
- Site analysis and opportunities and constraints assessment.
- User and behavior analysis.
- Documentation demonstrating how Artificial Intelligence tools have been used throughout the design process, including site analysis, research, ideation, scenario testing, visualization,

AI Park Design Challenge

simulations, and decision-making, and explaining the value added by AI and the role of human judgment in shaping the final proposal.

- Concept and preliminary design drawings.
- Masterplan and site plan.
- Landscape and public realm plans.
- Accessibility and circulation strategy.
- Sustainability and resilience strategy.
- Smart technologies and innovation strategy.
- Indicative Commercial and Service Facilities Plan, identifying the proposed supporting commercial and service uses, their approximate locations, and their relationship to key park destinations, access points, and community activity areas.
- Concept diagrams and design development diagrams.
- High-quality visualizations and renderings, including day and night perspectives.
- One-minute concept animation illustrating the design vision.
- Presentation boards.
- Any additional drawings, diagrams, visualizations, models, animations, or supporting materials necessary to effectively communicate the design vision, concept, methodology, and overall proposal.

Participants are responsible for ensuring that all required documents are successfully uploaded through the official Design Challenge website prior to the submission deadline. Late, incomplete, or non-compliant submissions may not be considered for evaluation.

No. Deliverable Description Format Requirement

1	Executive Summary Presentation	Summary of the design vision, concept, and key innovations.
2	Design Narrative and Concept Statement	Design philosophy, vision, placemaking approach, and overall concept.
3	Site Analysis and Opportunities Assessment	Site context, opportunities and constraints, environmental and climatic analysis.
4	User and Community Analysis	User groups, personas, community needs, aspirations, and human-centered design considerations.

AI Park Design Challenge

5	Artificial Intelligence Methodology Report	AI tools and platforms utilized, workflows, methodologies, design alternatives explored, and the role of AI in decision-making.
6	Concept and Preliminary Masterplan	Overall masterplan illustrating spatial organization, zoning, and activity distribution.
7	Landscape and Public Realm Plans	Landscape strategy, public realm design, planting strategy, and open space framework.
8	Accessibility and Circulation Strategy	Universal accessibility, pedestrian and bicycle circulation, and service access strategy.
9	Sustainability and Resilience Strategy	Environmental, social, and economic sustainability measures and resilience strategies.
10	Concept Diagrams and Preliminary Design Drawings	Concept evolution, user journey, environmental, circulation, and analytical diagrams. CAD/BIM
11	Sections and Elevations	Key sections and elevations required to communicate the proposal. CAD/BIM
12	High-Quality Visualizations and Renderings	Aerial perspectives, human-scale perspectives, and key experiential views.
13	Day and Night Perspectives	Visualizations illustrating the park experience during daytime and nighttime activation.
14	Full Project Presentation	Presentation summarizing the proposal, including analysis, concept, masterplan, diagrams, and visualizations as per the highlighted brief and scope of work.
15	One-Minute Concept Animation Video	A one-minute video illustrating the design vision, user experience, and key interventions. The use of AI tools in the preparation of the video is permitted.

AI Park Design Challenge

16	Additional Supporting Materials	Any additional drawings, diagrams, visualizations, models, animations, or supporting materials necessary to effectively communicate the proposal.
----	---------------------------------	---

SCHEDULE 3 – PARTICIPATING TEAMS

Participants may submit proposals either individually or as part of a multidisciplinary team. Where a proposal is submitted by a team, one member shall be designated as the **Team Leader** and shall act as the primary point of contact with Dubai Municipality throughout the Design Challenge.

Teams shall provide the details of all participating members and collaborators, including:

- Full Name;
- Organization or Affiliation (if applicable);
- Discipline and Area of Expertise;
- Role and Responsibilities within the Team;
- Contact Information;
- Emirates ID Number (for UAE residents); and
- Recent Passport-Size Photograph.

SCHEDULE 4

The awards associated with Dubai Municipality's AI Design Challenge shall be as follows:

- **First Prize:** AED 100,000
- **Second Prize:** AED 65,000
- **Third Prize:** AED 35,000

Participants shall submit a complete design proposal in accordance with the requirements, deliverables, and submission guidelines outlined in the Design Challenge Brief.

AI Park Design Challenge

The prizes are intended to recognize outstanding and innovative proposals that demonstrate excellence in human-centered design, the meaningful integration of artificial intelligence, sustainability, and the creation of future-ready public spaces.

The Organizing Committee and Jury reserves the right to amend the prize structure or withhold any prize should the submitted proposals not meet the required standards of quality and compliance.

SCHEDULE 5

PROGRAM

The Dubai Municipality AI Design Challenge shall be conducted in accordance with the following indicative programme:

Milestone	Date
Launch of the Dubai Municipality AI Design Challenge	28 June 2026
Opening of Registration and Submission Portal	28 June 2026
Deadline for Submission of Questions and Clarifications	5 August 2026
Publication of Responses to Queries	Throughout the submission period
Submission Deadline	15 August 2026

SCHEDULE 6 Conditions

Intellectual Property Right & General Terms & Conditions

- The applicant shall understand and acknowledge that all Intellectual property , data, and information rights will be reserved to Dubai Municipality for winning proposals (first, second, and third place).
- All intellectual property rights, including but not limited to concepts, designs, drawings, visualizations, videos, data, and other submitted materials relating to the winning proposals (First Prize, Second Prize, and Third Prize), shall be transferred to and become the exclusive property of Dubai Municipality.
- Participants grant Dubai Municipality the right to display and publish all submitted proposals as part of exhibitions, publications, communication materials, and community engagement activities, while appropriately acknowledging the authors of the proposals.

AI Park Design Challenge

- Participants hereby agree and acknowledge that Dubai Municipality's intellectual property rights, including its business activities, procedures and regulations, and that the same shall not be affected by the provisions contained herein.
- Participants hereby agree that In the event participant uses any third party or agent to carry out some of the tasks and obligations within the scope of Dubai Municipality AI Design Challenge, participant is obligated to inform Dubai Municipality, whether a natural or legal person, of the transfer of intellectual property rights, including concepts, designs, drawings, visualizations, videos, data, and other submitted materials, and other results of the participation to Dubai Municipality without dispute from any party, and the participant bears legal, financial, criminal, and civil liability as a result of failure to comply with notification in this regard.
- All Dubai Municipality' intellectual property rights hereby, shall be legally protected even if it does not register under its name. Any dispute concerning intellectual property clause, the legislations in force in the United Arab Emirates shall apply.
- Participants shall not use the trademarks, logos, or institutional symbols of Dubai Municipality without obtaining the prior written consent.
- Winner Participants irrevocably and definitively assign to Dubai Municipality all intellectual property rights, copyrights, and patents relating to the architectural designs, plans, drawings, 3D renderings, and any engineering documents prepared under their participation.
- Dubai Municipality has the full and exclusive right to use, modify, develop, rebuild, or license the designs (winning proposals), outputs, and drawings to others without needing written or verbal consent from the participant, and without paying any type of compensation.
- The winning participants undertakes not to reuse or reproduce the designs or any substantial part thereof for the benefit of any other project, entity, or client, and is not entitled to publish images of the design on any platform without the prior written consent of Dubai Municipality.
- Dubai Municipality solely has the absolute right to implement the winning proposals on the ground, or to make any modifications to them by any other designers, without any objection from the participants.
- The participant acknowledges and undertakes under this condition that all designs, plans, ideas, and materials submitted to the competition are entirely original works of his own making and personal effort, and that he owns all legal and intellectual rights relating thereto and has not previously published or submitted them to any other party.
- The participant warrants that the submitted designs do not infringe - in whole or in part - on intellectual property rights, copyrights, patents, trademarks, or any other legal or moral rights belonging to any third party.

AI Park Design Challenge

- Dubai Municipality disclaims all legal and financial responsibility for any claim, complaint, or lawsuit filed by any third party claiming ownership of the design or any part thereof. The participant bears full civil and criminal responsibility before the competent judicial authorities.
-
- By submitting a proposal, all participants of the Design Challenge grant Dubai Municipality a fully paid up, royalty-free, non-exclusive, assignable, sublicensable, worldwide, and perpetual licence to publicly display, publish, review, reference, and use all submitted proposals, including the ideas, concepts, methodologies, and design elements contained therein, for promotional, governmental, planning, project development, research, educational, and public communication purposes. This licence includes, without limitation, the right to post, display, or link to the submissions on websites, digital platforms, publications, exhibitions, reports, and any other media. All Participants further acknowledge and agree that Dubai Municipality may draw inspiration from, reference, and incorporate ideas, concepts, methodologies, and design elements contained in the submitted proposals in connection with project planning, project development, design, and implementation activities, without any obligation to provide compensation to the participant.

SCHEDULE 7 Evaluation Matrix

The Evaluation Matrix establishes the criteria and weighting framework that will be used by the Jury to assess all submissions. Proposals will be evaluated based on their innovation, human-centered approach, quality of design, effective integration of artificial intelligence throughout the design process, sustainability, feasibility, and potential for implementation. The evaluation process aims to ensure a fair, transparent, and balanced assessment of submissions.

1. Innovation and Creativity	Originality of the concept, creative use of technology and methodologies, and the ability to challenge conventional approaches and inspire future public space design solutions.	20%
2. Human-Centered Design, Sustainability and Quality of Life	Responsiveness to community needs, inclusivity, accessibility, health and well-being, environmental sustainability, climate responsiveness, social interaction, and the creation of meaningful, memorable, and livable places that enhance quality of life.	20%
3. Integration and Effective Use of Artificial Intelligence	Meaningful integration of AI throughout the design process, including analysis, ideation, scenario testing, decision-making, and the value added by AI to the final outcome.	20%

AI Park Design Challenge

4. Quality of Design and User Experience	Spatial quality, sense of place, functionality, placemaking, day and night activation, and the overall user experience.	15%
5. Feasibility and Implementation Potential	Practicality, constructability, maintainability, adaptability, operational requirements, and the potential for successful implementation, operation, and long-term viability.	20%
6. Quality of Presentation and Communication	Clarity of drawings and visualizations, strength of storytelling, communication of the design process, and professional quality of the submission materials.	5%
Total		100%

Jury Evaluation Methodology

Each criterion shall be scored on a scale of **1 to 10**, as follows:

Score Rating

1–2 Poor

3–4 Fair

5–6 Good

7–8 Very Good

9–10 Excellent

Schedule 8: Appendix
