## WHAT IS IN THIS FILE

Concept Animation Storyboard

DRAWING

Fig10 masterplan

PLAN

**02**

## THE SCALE OF THE ANALYSIS BEHIND IT

**39 years**

of climate normals (NCM, 1977–2015) rebuilt into an 8,760-hour modelled year

**8,760 hours**

of sun position ray-traced against 131 trees for every hour of the year

**15,000**

one-metre ground cells modelled for shade and comfort, site-wide

**4 models**

trained and tested for leakage — two of them decide what this document reports

**41 checks**

run on every rebuild, so a wrong number fails loudly instead of shipping quietly

**03**

## THE PHASES BEHIND THIS FILE

P9 AI Workflow & Visualisation

### VERIFY THIS DOCUMENT

Every quantity in this file is regenerated from data by code. Nothing is typed by hand.

Repository [github.com/wasim437/AI\\_SAFA](https://github.com/wasim437/AI_SAFA)

Live portal [wasim437.github.io/AI\\_SAFA/](https://wasim437.github.io/AI_SAFA/)

Produced by **BUILD** `tools/sync_film.py` **TESTS** `tests/test_film.js`

Reproduce `python run_analysis.py` · `python -m tests.test_pipeline`

# A ten-phase process, checked at every step

Nothing downstream is hand-drawn or hand-typed — change an input and every figure moves with it, or a test fails loudly.

12

OF 12

## 01 THE TEN PHASES

### P1 Site & Context Analysis

39 years of NCM normals rebuilt into an 8,760-hour year, verified back to within 0.39 °C; sun position for every hour via NREL/pvlib; shadow geometry; 7,640 residents inside a ten-minute walk

### P3 Opportunity & Objectives

The ranked problems converted into measurable targets, including the comfort-hours target the finished design is scored against

### P5 Masterplan Development

Every room struck off the crescent's centre; areas taken as the shoelace area of the drawn polygon, so the schedule closes on 15,000 m<sup>2</sup>

### P7 Performance & Sustainability

Water balance, carbon, the canopy PV deficit, and ray-traced shade performance by zone

### P9 AI Workflow & Visualisation

The four models and the anti-leakage discipline; drawings, boards, the analytics portal and the sixty-second film

THIS DOCUMENT

### P2 Problem Definition

Phase 1 findings turned into problems and scored by severity rather than listed flat — thermal discomfort dominates everything else

### P4 Concept Development

Multiple plan forms generated and swept against the solar model; the crescent selected on hours-with-no-shade, not on mean coverage

### P6 Detailed Design

The canopy section solved against shadow geometry — 7 m walk, 18 m gridshell at 4.5 m, 3 m southern louvre; 131 trees at mature canopy

### P8 User Experience & Activation

K-Means microclimate regimes and the hour-by-month comfort surface; programming targeted at late afternoon, spring and autumn

### P10 Submission Assembly

Every report and visual mapped onto the twelve upload slots, each with a manifest naming what produced it

## 02 THE CODE AND DATA BEHIND THIS DOCUMENT

## 03 REPRODUCE IT END TO END

```
pip install -r requirements.txt
python run_analysis.py           # data, models, figures
python -m src.drawings           # section, elevation, planting
python -m src.boards             # the presentation boards
python tools/build_submission_pdfs.py
python -m tests.test_pipeline    # 41 checks
```

UPLOAD SLOT 12 OF 12 · ONE-MINUTE CONCEPT ANIMATION — STORYBOARD

# Concept Animation — Storyboard

Sixty seconds, drawn from the project's own analysis

The film is not an illustration of the design; it is rendered from the design. Its geometry comes from the same arc definition as the masterplan and its sun from the same 8,760-hour solar model, so it cannot drift away from the drawings the way an animation produced separately would.

Al Safa 2 Park · **Falaj Al Safa** · 15,000 m<sup>2</sup> · Al Safa 2, Dubai · Mohamed Wasim, Individual Applicant · Issued 03 August 2026 · every quantity regenerated by `python run_analysis.py`

## 1. Structure — five scenes, sixty seconds

| Time    | Scene               | What it shows                                                                                                                                                         |
|---------|---------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 0–7 s   | <b>The site</b>     | Al Safa 2 as it is today: flat, exposed, and empty at midday                                                                                                          |
| 7–18 s  | <b>The heat</b>     | The reason it is empty — the modelled heat index across a summer day, and the hours that are lost to it                                                               |
| 18–38 s | <b>The crescent</b> | The arc builds and plants itself while a full computed day passes over it. 131 trees, the falaj, the radial alleys and the rooms appear in the order they are reached |
| 38–48 s | <b>Beneath it</b>   | Eye level on the walk: the dappled soffit, the louvre cutting the low sun, the channel at the edge                                                                    |
| 48–60 s | <b>The proof</b>    | The measured result — comfortable hours rising from 44.5% to 64.6% — as the park fills at dusk                                                                        |

Scene boundaries are asserted by `tests/test_film.js`, which renders every frame and fails on any gap, overlap or invalid value.

## 2. Why it can be trusted against the drawings

- The arc is the same 141 m radius as the masterplan, regenerated by `tools/sync_film.py` from `src/plan.py`.
- The sun positions are the same NREL-computed values used by the shade model — the shadows move correctly for the site's latitude and the time of year being shown.
- The tree count, the 0.9 m channel and the room layout are read from the same geometry as every drawing in this submission.
- Every frame is rendered by an automated test that fails on any NaN or undefined value, so a geometry change cannot break the film quietly.

## 3. The narration

The film carries a spoken commentary in four fifteen-second segments, cued to 0, 15, 30 and 45 seconds. The voice is synthesised; the words are not. Every figure it speaks — 56.8 °C in the open, a 141 m radius, 44.5% rising to 64.6% — is the same figure the analysis produces and the same one printed elsewhere in this submission.

The audio is embedded in the page rather than kept in files beside it. Opened as a local file, a browser refuses to load a sibling audio file at all, and cannot route one into a recording; inlined, it does both. That also keeps the film a single standalone file, which is the same reason its geometry is inlined rather than fetched.

## 4. How to produce the video file

The film records itself. Every frame is a pure function of one number — the time in seconds — so the page can hand the canvas and the narration straight to the browser's recorder and write the video out. Nothing is screen-captured, so the file carries no browser chrome, no desktop behind it, and no dependence on what the window was scaled to.

- Open `concept_film.html` in Chrome or Edge.
- Press **Record the film to a video file** and leave the tab in front for sixty seconds.
- The file downloads on its own as `Fa laj_Al_Safa_Concept_Film_60s.mp4` — 1920×1080, sixty seconds with narration, about 9 MB.
- **Narration on / off** beside it records a silent version instead, if a voice-over is not wanted.

Browsers that cannot write MP4 fall back to WebM, and a WebM written this way carries no duration in its header — it plays, but some players show no timeline. Convert it with `ffmpeg -i film.webm -c:v libx264 -pix_fmt yuv420p film.mp4`, or record again in Chrome or Edge, which write MP4 directly.

The film shows the **analysed** scheme exactly: the same arc, the same trees, the same solar model. It is therefore consistent with every number quoted elsewhere in this submission.

Fig10 masterplan

Technical drawing — to scale. Geometry generated by src/plan.py; every area is the measured area of the drawn polygon.

Masterplan — Falaj Al Safa

One arc, and every room struck off its centre. Drawn from src/plan.py, the same geometry the models use

ROOM SCHEDULE

|                                      |                                     |          |
|--------------------------------------|-------------------------------------|----------|
| 1                                    | Al Mamsha — the Crescent Walk       | 871 m²   |
| 2                                    | Al Falaj — the water channel        | 105 m²   |

| Training / validation / test split                           | 10,500 / 2,250 / 2,250 |
| Random seed, fixed for reproducibility                       | 42                     |

## WHAT THE CHECKS PROTECT

each one asserts what would otherwise drift silently

### Climate fidelity

the modelled year reproduces the published normals it was built from

### No overlaps

no room in the schedule overlaps another

### Areas close

every area sums back to 15,000 m<sup>2</sup>

### Budget held

the cost plan stays inside AED 35 M

### No leakage

no model can see its own answer in its inputs

## RUN IT YOURSELF

```
git clone https://github.com/wasim437/Al_SAFA.git
pip install -r requirements.txt
python run_analysis.py           # data, models, figures
python -m tests.test_pipeline    # 41 correctness checks
node docs/_PORTAL/selftest.js   # 64 portal checks
node tests/test_film.js         # every frame of the film
```

# The complete project, and where to check it

Every one of the 121 links below is live. The repository holds the data as issued and as processed, the code, the trained models, the drawings and the tests, and it runs end to end with one command. A juror who wants to know where a number came from can be given a file path rather than an opinion.

## THE DATA, AS PROCESSED (6)

|                                                                |                                           |
|----------------------------------------------------------------|-------------------------------------------|
| <a href="#">data/processed/cost_plan.csv</a>                   | The capital cost plan, line by line       |
| <a href="#">data/processed/hourly_climate_comfort_8760.csv</a> | The 8,760-hour climate and comfort series |
| <a href="#">data/processed/masterplan_geometry.json</a>        | The plan geometry, as exported            |
| <a href="#">data/processed/planting_layout.csv</a>             | Every one of the 131 trees                |
| <a href="#">data/processed/schema.json</a>                     | Generated by the pipeline                 |
| <a href="#">data/processed/spatial_grid_comfort.csv</a>        | The 15,000-cell ground grid               |

## THE TRAINED MODELS (3)

|                                              |                       |
|----------------------------------------------|-----------------------|
| <a href="#">models/cost_summary.json</a>     | Model output          |
| <a href="#">models/headline_metrics.json</a> | The headline numbers  |
| <a href="#">models/model_metrics.json</a>    | Trained-model metrics |

## THE TESTS (2)

|                                        |                                 |
|----------------------------------------|---------------------------------|
| <a href="#">tests/test_pipeline.py</a> | 41 correctness checks           |
| <a href="#">tests/test_film.js</a>     | Every frame of the concept film |

## THE NOTEBOOK (1)

|                                                                  |                                         |
|------------------------------------------------------------------|-----------------------------------------|
| <a href="#">notebooks/AL_SAFA_2_PARK_COMPLETE_ANALYSIS.ipynb</a> | The complete analysis, outputs embedded |
|------------------------------------------------------------------|-----------------------------------------|

## THE WEBSITE AND ANALYTICS PORTAL (9)

|                                               |                     |
|-----------------------------------------------|---------------------|
| <a href="#">docs/index.html</a>               | The project website |
