User Experience & Activation

Al Safa 2 Park — Personas, Daily/Seasonal Use, Programming & Journey Maps

AI-GENERATED DRAFT — FOR REVIEW. Personas and journeys are grounded in the real user groups from Phase 1.09, the real catchment population from Phase 1.13 (~7,640 residents within a 10-min walk, Dubai Statistics Center 2023), and the masterplan zones from Phase 5 — not generic.

8.1 User Personas

Persona	Profile	Primary Zones Used
Amina, 34 — parent	Visits after school pickup from adjacent Umm Suqeim Model School with 2 kids	Children's Play Zone, Family Picnic & Shaded Seating
Rashid, 68 — older resident	Daily evening walk, values shade and seating	Shaded Spine, perimeter jogging loop, Quiet Contemplation Garden
Sara, 16 — teenager	After-school social visit with friends	Community Plaza & Event Lawn, Outdoor Fitness & Wellness
Mr. Al Farsi — wheelchair user	Weekly visit for fresh air and social contact	Shaded Spine (100% step-free per Phase 5.7), Community Plaza
Fatima, 29 — fitness enthusiast	Early morning run before work	Perimeter jogging loop, Outdoor Fitness & Wellness

8.2 Daily Use Pattern

Time	Dominant Activity
05:00-08:00	Fitness/jogging (cooler hours, per Phase 1.05 comfort window)
08:00-15:00	Lowest use — peak heat, minimal shade-independent activity expected
15:00-18:00	Family/school pickup traffic — Children's Play Zone peak
18:00-23:00	Community Plaza, evening walking loop, social/teen use (within Manual's 05:00-23:00 operating window)

8.3 Seasonal Use

Nov-Apr (Phase 1.05 comfort window): full-day use across all zones expected. May-Oct: use concentrated in the 100%-shaded Shaded Spine and shaded room edges during midday (per Phase 7.1/7.2 computed coverage), with open lawns (Sports Lawn, Event Lawn) more viable in early morning/evening only.

8.4 Programming

Targeting the Neighborhood Parks Manual's benchmark of 60+ small events/year for a park this size: weekly fitness classes (Outdoor Fitness zone), monthly community markets (Community Plaza), and seasonal cultural celebrations aligned with UAE national holidays.

8.5 Events

Community Plaza & Event Lawn (1,224 sqm, Phase 5 schedule) sized specifically to host the Manual's benchmark small-to-medium event scale, with permeable paving (Phase 6.3) selected to support event loading.

8.6 Community Interaction

Central Community Plaza position (Phase 5.1) places it within natural view of every surrounding room, supporting incidental social interaction beyond programmed events.

8.7 Safety Experience

Continuous spine lighting (Phase 6.5) plus natural surveillance from the plaza's central position (Phase 5.8) support the brief's day/night, all-season safety requirement.

8.8 Inclusive Design

100% step-free primary circulation (Phase 5.7), poured-in-place rubber play surfacing (Phase 6.3), and accessible seating every ~30m (Phase 6.6) directly answer Phase 1.10's undocumented-accessibility-baseline finding with concrete commitments.

8.9 Children's Experience

Children's Play Zone (1,088 sqm) positioned directly off the Shaded Spine near the Main Entrance Plaza — shortest, most legible route from arrival to play, with Family Picnic seating immediately adjacent for parent sightlines.

8.10 Visitor Journey Map

Step	Amina (parent) — Weekday Journey
1. Arrival	Enters via Main Entrance Plaza (west) after school pickup
2. Orientation	Shaded Spine visible immediately, provides clear route
3. Destination	Turns into Children's Play Zone (first room off the spine)
4. Dwell	Sits in adjacent Family Picnic & Shaded Seating, maintains sightline to kids
5. Departure	Returns via Shaded Spine to Main Entrance Plaza, fully shaded route both ways
