|-------------------------------|---------|
| Phase6 Detailed Design Report | DRAWING |
| Elevation                     | DRAWING |
| Section                       | DRAWING |

## 02 THE SCALE OF THE ANALYSIS BEHIND IT

39 years

of climate normals (NCM, 1977–2015) rebuilt into an 8,760-hour modelled year

8,760 hours

of sun position ray-traced against 131 trees for every hour of the year

15,000

one-metre ground cells modelled for shade and comfort, site-wide

4 models

trained and tested for leakage — two of them decide what this document reports

41 checks

run on every rebuild, so a wrong number fails loudly instead of shipping quietly

### VERIFY THIS DOCUMENT

Every quantity in this file is regenerated from data by code. Nothing is typed by hand.

OF 12

## 01 THE TEN PHASES

### P1 Site & Context Analysis

39 years of NCM normals rebuilt into an 8,760-hour year, verified back to within 0.39 °C; sun position for every hour via NREL/pvlib; shadow geometry; 7,640 residents inside a ten-minute walk

### P3 Opportunity & Objectives

The ranked problems converted into measurable targets, including the comfort-hours target the finished design is scored against

### P5 Masterplan Development

Every room struck off the crescent's centre; areas taken as the shoelace area of the drawn polygon, so the schedule closes on 15,000 m<sup>2</sup>

### P7 Performance & Sustainability

Water balance, carbon, the canopy PV deficit, and ray-traced shade performance by zone

### P9 AI Workflow & Visualisation

The four models and the anti-leakage discipline; drawings, boards, the analytics portal and the sixty-second film

### P2 Problem Definition

Phase 1 findings turned into problems and scored by severity rather than listed flat — thermal discomfort dominates everything else

### P4 Concept Development

Multiple plan forms generated and swept against the solar model; the crescent selected on hours-with-no-shade, not on mean coverage

### P6 Detailed Design

THIS DOCUMENT

The canopy section solved against shadow geometry — 7 m walk, 18 m gridshell at 4.5 m, 3 m southern louvre; 131 trees at mature canopy

### P8 User Experience & Activation

K-Means microclimate regimes and the hour-by-month comfort surface; programming targeted at late afternoon, spring and autumn

### P10 Submission Assembly

Every report and visual mapped onto the twelve upload slots, each with a manifest naming what produced it

UPLOAD SLOT 04 OF 12 · KEY SECTIONS, ELEVATIONS &amp; MATERIAL PALETTE

# Key Sections, Elevations & Material Palette

The canopy section solved against the shadow geometry

This is the drawing the whole scheme rests on: a 7 m walk under an 18 m gridshell at 4.5 m, with a 3 m louvre on the southern face. Every dimension is read from the project's configuration and every sun angle from the solar model. None of it is drawn by eye.

Al Safa 2 Park · **Falaj Al Safa** · 15,000 m<sup>2</sup> · Al Safa 2, Dubai · Mohamed Wasim, Individual Applicant · Issued 05 August 2026 · every quantity regenerated by python `run_analysis.py`

## 1. The section, and the problem it solves

A flat canopy fails in a specific and predictable way. When the sun is low and to the south — which at 25°N is most of the winter afternoon — the shadow slides off the far edge of the path, and the walk is unusable exactly when the weather is at its best. An earlier version of this project claimed 99.2% annual shade on such a canopy. It was withdrawn.

The re-solved section makes four changes: a narrower walk (7 m rather than 9 m), a wider overhang (18 m, giving 5.5 m each side), a lower plane (4.5 m), and a 3 m vertical louvre on the southern face. The louvre is the piece that buys the winter — a mashrabiya's logic, a deep screen on the face the sun comes from. The section now measures 87.3%.

Section A-A at midspan. Both solstice sun angles are computed by the NREL algorithm for the site coordinates, not drawn. Technical drawing — to scale.

## 2. Elevation and structural rhythm

**Elevation — the Crescent Canopy**  
60 m of the 124 m run, to scale. 6 m structural bay

21 bays over the full run. Because the plan is an arc, no two bays are identical in plan — but every one is the same section, which is what keeps it buildable. Trees at mature canopy from the Phase 6 planting schedule.  
Source: src/config.py CRESCENT; bay spacing from the Phase 6 structure · Al Safa 2 Park · Falaj Al Safa · Dubai Municipality AI Design Challenge

Elevation — the bay rhythm, the perforated soffit at 12% transmittance, and the louvre screen on the southern face. Technical drawing — to scale.

The gridshell spans 18 m on regular structural bays. The soffit is perforated at 12% direct-beam transmittance, which produces dappled light on the walk rather than a flat dark tunnel. The shade model treats the canopy as a plane at the springing, so the drawing is conservative against the number rather than flattering to it — the built shell shades slightly more than claimed, never less.

### 3. Why the tree avenue exists

Shadow length is height divided by the tangent of solar elevation. At Dubai's summer noon a 6 m tree casts a 0.19 m shadow; at 20° elevation the same tree casts 16.5 m. That ratio is why the canopy alone cannot carry the winter, and why a tree avenue flanks it. The two systems fail at opposite ends of the year, which is exactly why both are needed.

### 4. Material and landscape palette

- **Structure** — steel gridshell, light-toned, with a perforated metal soffit; weathered bronze for the louvre fins.
- **Paving** — warm sand-toned stone on the walk with a high-albedo finish to limit re-radiation, and darker stone lining the falaj.
- **Earth** — Al Kathib is planted earth, not a wall. Cut and fill are balanced on site where possible.
- **Planting** — five desert species only. Ghaf takes the southern rank because it is the most drought-tolerant in the schedule.

| Species      | ScientificName          | Count | Native |
|--------------|-------------------------|-------|--------|
| Neem         | Azadirachta indica      | 58    | 0      |
| Ghaf         | Prosopis cineraria      | 16    | 1      |
| Ficus nitida | Ficus microcarpa nitida | 34    | 0      |
| Olive        | Olea europaea           | 11    | 0      |
| Date Palm    | Phoenix dactylifera     | 12    | 1      |

131 trees. Source: data/raw/species\_water\_carbon\_rates.csv.

Planting plan — 131 trees drawn at mature canopy radius. Technical drawing — to scale.

# Elevation

The structural bay repeated along the arc — one section, 21 bays

### WHAT THE CHECKS PROTECT

each one asserts what would otherwise drift silently

#### Climate fidelity

the modelled year reproduces the published normals it was built from

#### No overlaps

no room in the schedule overlaps another

#### Areas close

every area sums back to 15,000 m<sup>2</sup>

#### Budget held

the cost plan stays inside AED 35 M

#### No leakage

no model can see its own answer in its inputs

### RUN IT YOURSELF

```
git clone https://github.com/wasim437/Al_SAFA.git
pip install -r requirements.txt
python run_analysis.py           # data, models, figures
python -m tests.test_pipeline    # 41 correctness checks
node docs/_PORTAL/selftest.js   # 64 portal checks
node tests/test_film.js          # every frame of the film
```

# The complete project, and where to check it

Every one of the 125 links below is live. The repository holds the data as issued and as processed, the code, the trained models, the drawings and the tests, and it runs end to end with one command. A juror who wants to know where a number came from can be given a file path rather than an opinion.

[run\\_analysis.py](#)

Analysis module  
 The two presentation boards  
 The 8,760-hour year rebuilt from NCM normals  
 Every constant the project reads  
 The cost model against the AED 35 M ceiling  
 Assembles the ML training tables  
 Section, elevation, circulation, planting, facilities  
 The analysis charts  
 The four models  
 SINGLE SOURCE of the crescent geometry  
 Sun position and shadow ray-tracing  
 Analysis module  
 Runs the whole pipeline end to end

## THE DATA, AS ISSUED (7)

|                                                          |                                       |
|----------------------------------------------------------|---------------------------------------|
| <a href="#">data/raw/construction_unit_rates_aed.csv</a> | Source dataset                        |
| <a href="#">data/raw/dubai_climate_normals_ncm.csv</a>   | Source dataset                        |
| <a href="#">data/raw/dubai_population_dsc_2023.csv</a>   | Source dataset                        |
| <a href="#">data/raw/site_zoning_schedule.csv</a>        | The measured room schedule            |
| <a href="#">data/raw/sources.json</a>                    | Every source dataset, with its period |
| <a href="#">data/raw/species_water_carbon_rates.csv</a>  | Source dataset                        |
| <a href="#">data/raw/walk_catchment_rings.csv</a>        | Source dataset                        |

## THE DATA, AS PROCESSED (6)

|                                                                |                                           |
|----------------------------------------------------------------|-------------------------------------------|
| <a href="#">data/processed/cost_plan.csv</a>                   | The capital cost plan, line by line       |
| <a href="#">data/processed/hourly_climate_comfort_8760.csv</a> | The 8,760-hour climate and comfort series |
| <a href="#">data/processed/masterplan_geometry.json</a>        | The plan geometry, as exported            |
| <a href="#">data/processed/planting_layout.csv</a>             | Every one of the 131 trees                |
| <a href="#">data/processed/schema.json</a>                     | Generated by the pipeline                 |
| <a href="#">data/processed/spatial_grid_comfort.csv</a>        | The 15,000-cell ground grid               |

## THE TRAINED MODELS (3)

|                                              |                       |
|----------------------------------------------|-----------------------|
| <a href="#">models/cost_summary.json</a>     | Model output          |
| <a href="#">models/headline_metrics.json</a> | The headline numbers  |
| <a href="#">models/model_metrics.json</a>    | Trained-model metrics |

## THE TESTS (2)

|                                        |                                 |
|----------------------------------------|---------------------------------|
| <a href="#">tests/test_pipeline.py</a> | 41 correctness checks           |
| <a href="#">tests/test_film.js</a>     | Every frame of the concept film |

## THE NOTEBOOK (1)

|                                                                  |                                         |
|------------------------------------------------------------------|-----------------------------------------|
| <a href="#">notebooks/AL_SAFA_2_PARK_COMPLETE_ANALYSIS.ipynb</a> | The complete analysis, outputs embedded |
|------------------------------------------------------------------|-----------------------------------------|

## THE WEBSITE AND ANALYTICS PORTAL (9)

|                                               |                     |
