01 WHAT IS IN THIS FILE

Phase5 Masterplan Development Report	PLAN
Fig10 masterplan	PLAN
Model aerial	RENDER
Planting	DRAWING

02 THE SCALE OF THE ANALYSIS BEHIND IT

39 years

of climate normals (NCM, 1977–2015) rebuilt into an 8,760-hour modelled year

8,760 hours

of sun position ray-traced against 131 trees for every hour of the year

15,000

one-metre ground cells modelled for shade and comfort, site-wide

4 models

trained and tested for leakage — two of them decide what this document reports

41 checks

run on every rebuild, so a wrong number fails loudly instead of shipping quietly

VERIFY THIS DOCUMENT

Every quantity in this file is regenerated from data by code. Nothing is typed by hand.

Repository	github.com/wasim437/AI_SAFA
Live portal	wasim437.github.io/AI_SAFA/
Produced by	CODE src/plan.py src/figures.py DATA data/raw/site_zoning_schedule.csv
Reproduce	<code>python run_analysis.py</code> · <code>python -m tests.test_pipeline</code>

A ten-phase process, checked at every step

Nothing downstream is hand-drawn or hand-typed — change an input and every figure moves with it, or a test fails loudly.

02

OF 12

01 THE TEN PHASES

P1 Site & Context Analysis

39 years of NCM normals rebuilt into an 8,760-hour year, verified back to within 0.39 °C; sun position for every hour via NREL/pvlib; shadow geometry; 7,640 residents inside a ten-minute walk

P3 Opportunity & Objectives

The ranked problems converted into measurable targets, including the comfort-hours target the finished design is scored against

P5 Masterplan Development

Every room struck off the crescent's centre; areas taken as the shoelace area of the drawn polygon, so the schedule closes on 15,000 m²

THIS DOCUMENT

P7 Performance & Sustainability

Water balance, carbon, the canopy PV deficit, and ray-traced shade performance by zone

P9 AI Workflow & Visualisation

The four models and the anti-leakage discipline; drawings, boards, the analytics portal and the sixty-second film

P2 Problem Definition

Phase 1 findings turned into problems and scored by severity rather than listed flat — thermal discomfort dominates everything else

P4 Concept Development

Multiple plan forms generated and swept against the solar model; the crescent selected on hours-with-no-shade, not on mean coverage

P6 Detailed Design

The canopy section solved against shadow geometry — 7 m walk, 18 m gridshell at 4.5 m, 3 m southern louvre; 131 trees at mature canopy

P8 User Experience & Activation

K-Means microclimate regimes and the hour-by-month comfort surface; programming targeted at late afternoon, spring and autumn

P10 Submission Assembly

Every report and visual mapped onto the twelve upload slots, each with a manifest naming what produced it

python -m src.boards             # the presentation boards
python tools/build_submission_pdfs.py
python -m tests.test_pipeline    # 41 checks
```

UPLOAD SLOT 02 OF 12 · PRELIMINARY DESIGN MASTERPLAN

Preliminary Design Masterplan

The room schedule, and how 15,000 m² is allocated

The masterplan is generated, not drawn. Every room is a box in the crescent's own polar frame, mapped to site metres and clipped to the boundary — so each area is the measured area of the polygon actually drawn, and the schedule closes on 15,000 m² without anyone reconciling a spreadsheet.

Al Safa 2 Park · **Falaj Al Safa** · 15,000 m² · Al Safa 2, Dubai · Mohamed Wasim, Individual Applicant · Issued 04 August 2026 · every quantity regenerated by python `run_analysis.py`

1. The organising geometry

One arc. A crescent of shade 141 m in radius sweeps across the site, bowing convex south so that its hollow opens to the north. A 0.9 m water channel runs beneath its northern drip line. Every room in the park is struck off the same centre, so no room is a rectangle and every room faces the crescent square-on.

The arc has a chord of 138 m and a sagitta of 18 m, giving a radius of 141.25 m and a true arc length of 144.2 m. Those four numbers generate everything else in this report.

Masterplan with the numbered room schedule. Technical drawing — to scale.

2. Room schedule

Room	Category	Area (m ²)	% of site
Al Mamsha — the Crescent Walk	Circulation	871	5.81%
Al Falaj — the water channel	Water	105	0.70%

Room	Category	Area (m²)	% of site
Crescent Shade Margin (N)	Green	549	3.66%
Crescent Shade Margin (S)	Green	715	4.77%
West Gate Majlis	Arrival	439	2.93%
East Gate Majlis	Arrival	439	2.93%
Al Nakhil — the Oasis Basin	Green	1,140	7.60%
Quiet Contemplation Garden	Passive	708	4.72%
Children's Dune Play	Active	1,267	8.45%
Family Picnic Grove	Passive	1,267	8.45%
Outdoor Fitness Terrace	Active	908	6.06%
Native Planting / Biodiversity Wadi	Green	894	5.96%
Community Plaza & Event Lawn	Social	788	5.25%
Souk Kiosks & Services	Commercial	417	2.78%
Multipurpose Sports Lawn	Active	630	4.20%
Al Kathib — the dune berm	Green_Buffer	1,464	9.76%
Al Madar — the perimeter loop	Circulation	986	6.57%
Al Sikkak — shaded alleys & setbacks	Circulation	1,414	9.43%

Total 15,000 m². Areas are shoelace areas of the drawn polygons, and the pipeline asserts that the schedule sums to the site area.

3. Where things are, and why

- **The hollow holds the lingering.** The Oasis Basin, the quiet garden, the children's play and the picnic grove all sit on the concave side, which the comfort model shows is measurably cooler than the convex face.
- **The convex face takes the active and the commercial.** The sports lawn, the community plaza and the souk sit south of the arc, where exposure matters less and evening use dominates.
- **The alleys are radii.** Every sikka is a radius of the same circle, so every room presents its face to the crescent rather than a corner.
- **The perimeter is a berm, not a fence.** Al Kathib is planted earth against the roads, doing three jobs at once — noise, glare and heat.

4. Site boundary — a stated assumption

The site is modelled as a 150 × 100 m rectangle. This is an **assumption** pending confirmation against the CAD file issued with the competition documents. Every area figure in this submission depends on it, and it is flagged here rather than left for a juror to discover.

Planting plan — 131 trees at mature canopy radius. Technical drawing — to scale.

Fig10 masterplan

The plan as the code draws it — every room struck off the arc centre, areas measured from the drawn polygon

Masterplan — Falaj Al Safa

One arc, and every room struck off its centre. Drawn from `src/plan.py`, the same geometry the models use

Crescent radius 141 m, sagitta 18 m. Green dots are the 131 trees; circles are the majlis pavilions; the dashed line is Al Madar, the running loop. Site boundary is an ASSUMED 150×100 m rectangle pending DWG confirmation.
Source: `src/plan.py` — areas are the shoelace area of each drawn polygon · Al Safa 2 Park · Falaj Al Safa · Dubai Municipality AI Design Challenge

ROOM SCHEDULE

DRAWN BY [src/plan.py](#) [src/figures.py](#) **READ FROM** [data/raw/site_zoning_schedule.csv](#) [data/processed/masterplan_geometry.json](#)

Every path above is a live link. Nothing on this sheet was drawn by hand — regenerate it with `python run_analysis.py`

Model aerial

Artistic impression — illustrative of design intent. AI-generated.

Planting

131 trees at mature canopy, five desert species, placed from the planting schedule

Planting plan — 131 trees

Drawn at mature canopy radius. The avenue is structural: it carries the shoulder seasons the gridshell cannot

- Ghaf (*Prosopis cineraria*) ×16 · 45 L/day
- Olive (*Olea europaea*) ×11 · 60 L/day
- Neem (*Azadirachta indica*) ×58 · 90 L/day
- Date Palm (*Phoenix dactylifera*) ×12 · 120 L/day
- Ficus nitida (*Ficus microcarpa nitida*) ×34 · 110 L/day

28 of 131 trees are UAE natives (Ghaf and Date Palm). Peak summer irrigation demand 11.8 m³/day. Ghaf takes the southern rank because it is the most drought-tolerant species in the schedule and that rank is the more exposed of the two.

TREES PLANTED

MEASURED RESULT

models/headline_metrics.json

Annual daylight hours modelled	4,402
Comfortable daylight hours — today	44.5%
Comfortable daylight hours — as designed	64.6%
Mean heat-index reduction under canopy	7.13 °C
Peak heat index, exposed	56.8 °C
Peak heat index, shaded	48.7 °C
Crescent Walk shaded, canopy and louvre	87.3%
Site-wide mean shade	34.1%
Trees planted	131

TRAINED MODELS, ON HELD-OUT TEST SETS

models/model_metrics.json

M1a Random Forest — shade surrogate, test R ²	0.9982
M1b Neural network — deployed surrogate, test R ²	0.9944
M2 Gradient Boosting — comfort band, test accuracy	97.5%
M3 K-Means — regimes selected by silhouette	k = 2
Training / validation / test split	10,500 / 2,250 / 2,250
Random seed, fixed for reproducibility	42

WHAT THE CHECKS PROTECT

each one asserts what would otherwise drift silently

Climate fidelity

the modelled year reproduces the published normals it was built from

No overlaps

no room in the schedule overlaps another

Areas close

every area sums back to 15,000 m²

Budget held

the cost plan stays inside AED 35 M

No leakage

no model can see its own answer in its inputs

RUN IT YOURSELF

```
git clone https://github.com/wasim437/Al_SAFA.git
pip install -r requirements.txt
python run_analysis.py           # data, models, figures
python -m tests.test_pipeline    # 41 correctness checks
node docs/_PORTAL/selftest.js   # 64 portal checks
node tests/test_film.js         # every frame of the film
```

The complete project, and where to check it

Every one of the 122 links below is live. The repository holds the data as issued and as processed, the code, the trained models, the drawings and the tests, and it runs end to end with one command. A juror who wants to know where a number came from can be given a file path rather than an opinion.
