

Regional Analysis

Al Safa 2 Park — Dubai → District → Neighborhood → Park

1. Scale Progression Studied

Dubai & rarr; District & rarr; Neighborhood & rarr; Park

2. Dubai-Wide Context

- The site sits within Dubai's established low-rise residential belt west of Sheikh Zayed Road (Al Safa, Al Wasl, Umm Suqeim, Jumeirah) — one of the city's oldest planned neighborhood clusters.
- Dubai Municipality's own Neighborhood Parks Manual classifies this typology as a District/Community/Neighbourhood park: primarily for nearby residents, operating 05:00–23:00, all seasons.

Density Band	Park Area Range (sqm)
High (>220 person/ha)	3,000 – 150,000
Medium (70–220 person/ha)	3,500 – 300,000
Low (<70 person/ha)	4,000 – 500,000

Al Safa 2 Park = 15,000 sqm, placing it in the neighborhood-scale band regardless of density tier — consistent with the low-rise villa/townhouse context.

3. District Level

From the official master-plan location graphic, the park sits at the convergence of four named districts: **Umm Suqeim First** (west), **Al Safa Second** (north-east), **Al Manara** (south), and **Al Qouz Industrial First** (east, across Sheikh Zayed Road / E11).

4. Neighborhood Level

- Umm Suqeim Model School for Basic Education (NE, walking distance)
- Dubai Physiotherapy & Rehabilitation Center (N, adjacent)
- Aisha Butti Al Mulla Masjid (SE, adjacent)
- Local street grid: 4C, 6C, 6D, 10C/D, 31A, 37A, Streets 27/35, B29, C14
- ONPASSIVE Metro Station across Sheikh Zayed Road to the east

5. Real Population & Catchment (Dubai Statistics Center, 2023)

The surrounding communities' populations are now sourced from real data (Dubai Statistics Center 2023 Population Bulletin), replacing the earlier data gap:

Community	Residents (2023)
Umm Suqeim First (356)	7,443
Umm Suqeim Second (362)	9,220
Umm Suqeim Third (366)	4,867

Community	Residents (2023)
Al Safa	16,986 (density 3,800/km2)

A full walk-catchment demand model built on this real data is provided as its own report:
Phase1.13_Catchment_Demand_Analysis. Headline: ~7,640 residents live within a 10-minute (800m) walk, and estimated peak concurrent demand (~169 visitors) fits within the Neighborhood Parks Manual's 225-600 capacity benchmark for a 15,000 sqm park.

6. Park Level

15,000 sqm neighborhood park, existing and slated for full redevelopment. Per the Neighborhood Parks Manual's benchmark for this archetype: target users are families, sport enthusiasts, picnickers, teenagers, and pet owners; typical visit duration 1–3 hours; peak visitor capacity 150–400 visitors per 10,000 sqm.

7. Regional Network Items — Data Status

Item	Status
Service radius / catchment population	■ NOW SOURCED — Dubai Statistics Center 2023 (see Phase 1.13)
Major roads	■ Available — SZR (E11), Al Wasl St, Al Manara St
Metro	■ SOURCED — ONPASSIVE Station, Red Line, Fare Zone 2 (see Phase 1.08)
Green network (linkage to other Dubai parks)	Not available — requires Dubai Municipality GIS layer
Urban growth trend	Not available — requires Dubai 2040 Urban Master Plan data

Remaining "Not available" items require GIS layers not in the competition files, logged in **00_MASTER_TRACKER** — not fabricated here.
