

Human Analysis

Al Safa 2 Park — User Groups (Brief + Neighborhood Parks Manual)

1. User Groups Named in the Competition Brief

The brief (Schedule 1, Section B) explicitly requires consideration of: Children, Youth, Families, Older adults, People of Determination.

2. Target Audience per Neighborhood Parks Manual

Families, Sport enthusiasts, Picnickers, Teenagers, Pet owners.

3. Target Parameters (Manual Benchmarks)

Parameter	Benchmark
Duration of visit	1-3 hours
Peak visitor capacity	150-400 visitors per 10,000 sqm
Number of events supported	S: 60+/yr, M: 24+/yr, L: 3+/yr
Gross spend per visit	AED 20-80
Leasable commercial area	~15% of total park area / 2-5 sqm per visitor

Applying the capacity benchmark to this site's 15,000 sqm: indicative peak capacity range is approximately **225-600 visitors** — a benchmark-derived estimate, not a measured figure.

4. Office Workers, Students, Visitors

Not explicitly addressed in the brief; but given adjacency to Umm Suqeim Model School for Basic Education (confirmed from master-plan graphic), student/school-day traffic is a plausible real user group worth carrying forward even though not explicitly named in the brief. City-wide "visitors" are also relevant given this is a flagship AI Design Challenge site.

5. Activity Mapping, Movement, Behavior, Comfort, Needs — Data Status

Genuine behavioral data (movement heatmaps, dwell-time studies, comfort surveys) requires either an actual site visit/observation study or sensor/mobile-location data — neither is available in the provided competition package. The brief explicitly asks participants to address this using AI tools (persona simulation, movement pattern analysis) as part of the design process — meaning it is expected to be *produced* in later phases, not sourced as existing data now.

6. What Belongs Here vs. Later

This document captures the known, evidence-based facts about who uses/will use the park. Persona development, journey mapping, and behavior simulation are correctly deferred to Phase 8 (User Experience & Activation) and Phase 4.5 (AI-Assisted Exploration).
