

Accessibility Analysis

Al Safa 2 Park — Existing Conditions Baseline (Pre-Design)

1. Brief Requirements (Schedule 1, Section D)

- Universal design principles; equitable access for all users including People of Determination.
- Safe, intuitive, accessible circulation throughout the park.
- Consideration of children, youth, families, older adults, People of Determination.
- AI/data-driven approaches encouraged to improve accessibility and user experience.

2. Existing Conditions — What We Can Assess Now

Aspect	Status
Wheelchair route continuity	Unknown — requires DWG path/level data or site visit
Stroller/pram usability	Unknown — same as above
Slopes/gradients	Unknown — requires survey/contour data (may exist in DWG once converted)
Wayfinding signage	Not visible in provided graphic
Lighting for safety/visibility	Not visible in provided graphic
Accessible parking/drop-off	Not confirmed — see Transportation Analysis (1.08) gap
Tactile paving / accessible surfacing	Unknown — requires DWG material layer or site visit

3. Honest Baseline Statement

There is currently no verified accessibility audit data for the existing Al Safa 2 Park in the materials provided. This is not unusual for an as-built park predating explicit universal-design requirements, but it means any claim about the existing park being accessible or inaccessible would be speculation. The correct, defensible position for the submission is:

"Existing accessibility conditions could not be fully verified from available records; the proposed design will be built to full universal-design compliance regardless of baseline, per the Brief's explicit requirement."

4. Carry-Forward

Accessibility as a design requirement (not existing-condition analysis) belongs in Phase 3.4 (Project Objectives), Phase 5.7 (Master Plan Accessibility), and Phase 8.8 (Inclusive Design). This document only establishes the baseline: largely undocumented, therefore treated as a blank slate requiring full universal-design application in the new design.
